Complete Printers' Furnishers,

Standard Works,

CROSS STREET, FARRINGTON ROAD, LONDON, E.C.

REGISTERED TELEGRAPHIC ADDRESS .. COMPOSITION, LONDON.
TELEPHONE (NATIONAL) HOLBORN, 4607.

Valuers to the Trade.

*Valuations carefully prepared for Fire Claims, Probate,
Transfers, Stocktaking, &c.*

Terms on application to Managing Director.

THE "STANDARD" WORKS,

Fredk. Ullmer, Ltd., London.

ESTABLISHED NEARLY A CENTURY AND POSSESSED OF MANY FACILITIES FOR DOING BUSINESS.

OUR LISTS CONTAIN SOMETHING FOR EVERY PRINTER.

Our Lists include the following:

MACHINERY AND MATERIALS LIST.
TYPE CATALOGUE No. 189
Upwards 2,000 Faces.
SUPPLEMENTARY No. 189
Nearly 1,000 Faces.
WOOD LETTER SPECIMEN BOOK.
"STANDARD" CIRCULAR.

SECOND-HAND TYPE & MACHINERY.
ZINC RULES, &C.
ROLLER LIST, &C.
BOOKBINDERS' LIST.
LIST OF BRASS TYPE AND HANDLE
LETTERS.

NOTICES.

New Customers. To save delay in the execution of orders received from firms with whom we have no ledger account, it is requested that a remittance accompany the order, or two references to firms with whom they have done business.

Rollers. When Rollers are sent to be clothed or reclothed, they should be advised same day by post; this saves delay in returning. When sending Rollers up to be re-covered, consign as iron spindles.

Empties, Goods in Exchange, &c. Boxes are credited at prices charged if returned within 21 days from receipt, and delivered free at our Works. No boxes, old metal, or other goods in exchange will be received without being previously advised by post.

Credits. Credits for returns, boxes, old metal or other goods taken in exchange are deducted before any discount is allowed at settlement of account—discount only being allowed on the balance after all credits are deducted.

Errors. Any error in delivery or execution of orders must be notified within 21 days from date of invoice, otherwise no allowance can be made.

Old Type Metal. Price allowed for Old Type, if small, 3d. per lb.; if large, 2½d. per lb., delivered free at our Works, and in exchange for other goods, type, or material. Old metal, brass cuttings, &c., subject to variation in market price.

Telegraphic Address—"Composition, London."

Telephone (National)—Holborn, No. 4607.

Foreign Indents. To insure promptness in the despatch of foreign orders, a remittance should accompany all orders as under:—

½ of the amount if order is above £100.
½ " " " under £100.

Interest at current Bank Rate will be allowed on all advance payments from the date of receipt of order to despatch of same. For the balance of account we draw @ 7 or 14 days' sight. The B/Ls. are attached to the Draft and forwarded through our Bankers for presentation, and when the Draft is duly provided for, the B/Ls., &c., are handed over, and goods can be obtained.

Illustrated Price List

OF

New Machinery and Materials

FOR

LETTERPRESS PRINTERS, LITHOGRAPHERS,
BOOKBINDERS AND STATIONERS.

FREDK. ULLMER, LTD.,
"Standard" Works,
CROSS STREET, FARRINGTON ROAD, LONDON, E.C.

Registered Telegraphic Address: "COMPOSITION, LONDON."
Telephone (National): HOLBORN, 4607.

ENTERED AT STATIONERS' HALL, MAY, 1902.

May, 1902.

OUR thanks are due to all our friends who have from time to time favoured us with their esteemed orders, and have thereby helped us to build up a business known in all parts of the world.

We trust this Revised Illustrated List of New Machinery and Materials which we now place in their hands will be found mutually helpful, and will tend to increase the intercourse we have enjoyed for such a long period with so many of the leading houses in the Trade, town, country, and export. The Printer will find in this List most things that he may require to make his office complete and up-to-date—from a Bodkin to a Fine Art Machine, and no effort shall be spared on our part to despatch with promptitude and care all orders entrusted to us.

We have added very considerably to our Manufacturing Departments since the last List was issued. Specially adapted machinery has been laid down in our Joinery Department for making Cases, Frames, Cabinets, Racks, Furniture, Reglet, &c., and the quality of goods turned out by us is, we believe, second to none in the market. Our Roller Department, too, has been equipped with specially constructed plant, and our Rollers are made by an improved method which gives a beautiful and smooth surface.

In the Brass Rule, Galley, and other Departments, we have endeavoured to keep pace with the growing demand for good quality at the cheapest possible figure.

We have remodelled the "Standard" Improved Cylinder Machine, and the price will be found lower than any other well-finished machine in the Trade; with balance flyers, good inking, specially ground cylinders and ink duct, and cut gearing throughout.

A large stock of Machinery and Materials is always kept ready in the warehouse and can be despatched promptly.

In addition to new goods we have usually on hand a good and reliable stock of Second-hand Cylinder and Platen Machines, Presses, Cutting Machines, &c., which have been taken in exchange. These are thoroughly overhauled on the premises and tested before being despatched, and can be recommended. We send out no machine we cannot guarantee to be in good working order.

As well as our own specialities we are able to supply New Type from all the leading foundries at their prices and terms, and a copy of our Type Catalogue, containing between two and three thousand different faces, borders, ornaments, &c., will be sent on application.

We keep a special staff of Engineers, competent and experienced, to undertake all classes of Repairs to Gas Engines, Motors, Machines, Presses, &c., and also for Removals of Plant.

The Engravings in this List indicate the general feature of the article they represent, but are not always binding as to details, as occasionally alterations in patterns, &c., for improvements are made after the List has been issued.

ENGINEERING DEPARTMENT.

We undertake
Repairs, Removals,
and _____
Breakdown Jobs.

Our Planing Machines, Lathes, Drilling
Machines, &c., are of the Best Kind.

You may rely on us to Serve You Well.

WHEN you have a breakdown on your Machines, or repairs are wanted, send to us at once. We have a staff of thoroughly competent and experienced hands for that class of work, and we will serve you honestly and well, and save you money.

ESTABLISHED NEARLY A CENTURY.

Fredk. Ullmer, Ltd., 

“Standard” Engineering Works,
Cross Street, Farringdon Road,
LONDON, E.C.

Alternate Current Single Phase Electric Motors

FOR DRIVING ALL KINDS OF MACHINERY.

THE FOLLOWING ADVANTAGES are claimed for the Langdon-Davies Patent Single Phase Alternate Current Motors:—

- 1.—They are self-starting.
- 2.—They are self-starting without taking a current larger than that taken when running at full load.
- 3.—They are very simple in construction, and not liable to get out of order.
- 4.—They have no brushes, commutators, or collecting rings, the presence of which in other motors necessitates constant attention and frequent repairs
- 5.—The whole of the circuits in the Motor through which the currents pass being permanently closed, there is no sparking, which latter is a source of danger in mines, &c., and the absence of which lessens insurance risks everywhere.
- 6.—They require no skilled attention whatever.
- 7.—They are started and stopped by simply turning a switch.
- 8.—The cost is low.
- 9.—The power factor is high, which, though comparatively unimportant to the user, is of importance to the Supply Company.

PRICES AND SPEEDS.

The Prices quoted below include Starting Resistance Switch and Pulley, complete, ready for running.

STANDARD PATTERN MOTORS.

Brake H.P.	PRICE.		APPROXIMATE FULL-LOAD SPEED PER MINUTE AT PERIODICITIES BETWEEN			Pulleys Inches.	
	100 Volts	200 Volts	40 - and 50 -	51 - & 69	70 - and 100 -	Diam.	Face
Half -	15 0 0	7 0 0	2150 ,, 2700	For Prices and Speeds of Motors for these Periodicities, see Special Low Speed Price List.	1900 ,, 2700	2	4
One -	20 0 0	22 10 0	2200 ,, 2750		1950 ,, 2750	2	4
Two -	30 0 0		2200 ,, 2750		1950 ,, 2750	3	6

Four -	40 0 0		2250 ,, 2800		2000 ,, 2800	4	6
Six -	60 0 0		2250 ,, 2800		2000 ,, 2800	4	8
Nine -	80 0 0		40 - and 60 - 1150 ,, 1700		61 - and 100 - 1150 ,, 1900	6	8
Twelve -	100 0 0		1150 ,, 1700		1150 ,, 1900	9	9

SPECIAL LOW SPEED PATTERN MOTORS.

Brake H.P.	PRICE.		APPROXIMATE FULL-LOAD SPEED PER MINUTE AT PERIODICITIES BETWEEN		Pulleys Inches.	
	100 Volts	200 Volts	40 - and 69 -	70 - and 100 -	Diam.	Face
Half -	20 0 0	22 10 0	1100 ,, 1900	1250 ,, 1800	3	6
One -	30 0 0	32 10 0	1100 ,, 1900	1250 ,, 1800	3	6
Two -	40 0 0		1100 ,, 1900	1250 ,, 1800	3	6
Three -	50 0 0		1150 ,, 1950	1300 ,, 1900	4	6
Four -	60 0 0		1150 ,, 1950	1300 ,, 1900	4	8
Six -	80 0 0		1150 ,, 1950	1300 ,, 1900	4	8

LARGER SIZES QUOTED FOR ON APPLICATION.

DIRECTION OF ROTATION.—This is counter-clockwise (when facing the pulley) unless otherwise ordered.
 SPEED.—In the case of Periodicities between those shown above, the speed will be proportional: thus, if Periodicity is 83 and size of Motor 3 H.P. the speed = $\frac{83}{2000} \times 2371$.

OTHER POWERS AND SPEEDS GIVEN ON APPLICATION.

A Few of its Advantages.

Enclosure. The arrangement of the magnet provides a strong, cast-steel casing for the armature and field coil; at the same time the casing is essentially part of the Motor. There is no extra weight required, and the casing cannot be removed or damaged by accident. The enclosure meets the requirements of the Fire Offices, which are now most stringent.

The Dimensions of the Motors are believed to be considerably smaller than those of any other enclosed Motor under the same conditions. The shortness of the magnetic circuit, and the fact that there is only one joint in it, reduces the power used in field excitation. The mechanical strength of all parts subject to strain is very great, and the Motors will safely carry double their rated loads for short periods.

The Lubrication is automatic, being effected by means of rings, two being fitted to each bearing.

All Parts are Built to Standard, and are interchangeable.

The Field Coil is readily removable, and thus the winding can be easily altered, or Motors can be made suitable for other speeds, powers, and voltages.

The Armature Conductors are protected by being embedded in slots lined with a special insulation, thus securing a positive drive; and are so arranged that no binding wires are required, thus removing a fruitful source of breakdown. In many sizes the armature coils are wound on formers, and are removable.

The Brushes are of carbon, and are free from sparking from no load to full load.

IMPROVEMENTS.
USING ORDINARY
COMMERCIAL PETROLEUM.

“Demon” “Otto” Principle Oil Engine.

All sizes can be supplied
so as to be convertible
from oil to gas at a charge
of 25/- extra.

Simple
AND
Efficient.

Designed
for management by
unskilled hands.

Advantages of Pasley's Patent “Demon” Oil Engine.

- It uses ordinary petroleum lamp oil, procurable everywhere.
- It is most economical in consumption of oil.
- It is fitted with adjustable governor to all sizes.
- It works on the well-known “Otto” principle.
- It has no complicated parts to get out of order.
- It is the acme of simplicity. It can be started in 5 minutes.
- It can be stopped and re-started at a moment's notice.
- It has hot tube ignition—the only reliable method.
- It requires little or no attention whilst working.
- It is of first-rate workmanship and materials throughout.
- It is made so that all parts subject to wear are renewable.
- It is most compact and occupies little space. It is moderate in price.

THE CHEAPEST WELL-FINISHED MACHINE IN THE TRADE.

THE IMPROVED "Standard" Cylinder Machine.

NOW IN USE IN ALL PARTS OF THE WORLD.

BEAUTIFULLY FINISHED. CUT GEARING THROUGHOUT.

The above illustration represents the Demy to Double Crown sizes. Double Demy and larger sizes have extra strong framework. For sizes under Demy see next page.

These Machines are made from entirely new patterns. Nothing but the best class of material is used, and the workmanship is good. They are beautifully finished machines.

These Improved "Standard" Machines are now in use in the United Kingdom, Spain, Portugal, France, Holland, Germany, Turkey, Smyrna, East and West Indies, New Zealand, South America, Brazil, Morocco, Buenos Ayres, South Australia, Africa, Belgium, Norway, United States, Hong Kong, &c.

Easy and Quiet in Working. Simple and Perfect in Construction. Good Rolling Power. The Cylinders are Ground dead true by special machinery, and save time in making ready. Adapted for all classes of work. Balance Flyers are fitted. Perfect Register Guaranteed. The Inking Arrangements are very good. See List of Testimonials next page.

A FEW TESTIMONIALS.

READING, January, 1900.
Gentlemen, We were so satisfied with the workmanlike manner in which the machine was erected, and up to the present the work turned out by it has been quite as good as from machines running into more money, and such being the case you may rely on us giving you a chance for other machinery we shall no doubt require.
PALMER & LUMB.

MESSRS. F. ULLMER, LTD., FULHAM, S.W.
Cross Street, Farringdon Road, E.C.

Dear Sirs, We have given your Double Demy “Standard” Wharfedale an excellent test during the two months we have had it running, especially on process block work, and are pleased to inform you it gives every satisfaction.
Yours truly, ARTHUR W. PEGG.

6, SNOW HILL, E.C., May 1st, 1901.
Gentlemen, The Improved Double Crown “Standard” Machine you recently supplied is working exceedingly satisfactorily, and is capable of turning out very good work—equal to a much higher price machine.
Yours truly, ARTHUR CHILVER.

SHEPTON MALLETT, September, 1900.
Gentlemen, We herewith enclose cheque as promised. The machine was erected without any trouble whatever; we have given it a fair trial and we are simply delighted with it; we think you have eclipsed yourselves by producing such a machine. This is the fourth “Standard” that we have bought, and if we required a dozen more machines we should still continue to buy your “Standard.”
Yours faithfully, J. H. DAY & SON.

BOSTON, September 12th, 1901.
I must say how delighted I am with the Demy “Standard.” Could not possibly do without it. It is A-1.
Yours truly, A. BROUGHTON.

FAVERSHAM, May 5th, 1900.
Gentlemen The Double Crown Improved “Standard” is giving every satisfaction, and is no trouble. I enclose cheque and cannot say how glad I am that I bought it.
Yours truly, FREDK. AUSTIN.

HONGKONG.
Dear Sir, We have now had for some time in use five (5) Foolscap Broadside “Standard” Cylinder Machines, and since September this year one also of Double Crown size, with your new balanced flyers, and can, therefore, unhesitatingly express a reliable opinion as to their real worth. The machines are strong and durable, the one invoiced by you in May, 1885, being still in use and doing good service. This is saying a great deal in a country where there is so little of the skilled labour, and so much depends on the Chinese machine minder. The smaller machine is admirably adapted for jobbing work, and should be an acquisition in every office where speed and economy are important considerations. It is an excellent value for the price. For fine book work the Double Crown “Standard” has given us every satisfaction, and is equal to more expensive machines of the same size we have in our office. The best proof of our appreciation of the “Standard” Works will be found in the fresh order we have now the pleasure of handing you for another Double Crown and a Royal “Standard” Cylinder Machine with steam fittings.
Yours faithfully, NORONHA & CO.

The above are only selections from a large list.

FOR FINE
ART WORK.

*This Machine is fitted with Patent Automatic Front and Side Lay, by which Dead Register is obtained (without the use of Points), and also Greater Speed attained.
Four Rollers cover a full-size Forme.
Fitted with Reciprocating Riders, together with Storage Rollers.
All Roller Forks Adjustable.
Centre Stag in Cylinder, with Extra Strong Shafts and Cylinder Necks.
The Cylinder is placed directly over a rigid Cross Frame, so as to ensure Solid Impression.
Double Brads to ensure a steady run when going home.
Four Broad Belt Tracks.
All Machines fitted with our Patent Balance Flyer.*

*Automatic Cylinder Check, which stops the Grippes, Feed Board, and Pusher Bar, and holds the Cylinder secure until automatically released.
All Cylinder Wheels, Roller Gear and Tracks, Engine Cut, Double Driving Wheels, Apparatus for Regulating Ink Supply, &c.*

PRICES.
Double Demy ... £260. Double Royal ... £286. Quad Crown ... £346.

Patent Two-Feeder Machine.

List of Prices
of Patent
Two-Feeder
Machine.

No. 1.—Size of
sheet, 36 x 24 in.
£360.

No. 2.—Size of
sheet, 44 x 32 in.
£384.

No. 3.—Size of
sheet, 50 x 37 in.
£440.

No. 4.—Size of
sheet, 54 x 42 in.
£500.

No. 5.—Size of
sheet, 60 x 50 in.
£560.

THE above Machine possesses **Important Advantages** over all others of its kind. It prints large or small Newspapers at will, and **no alteration of the printing surface of the cylinder, nor removal of blankets nor tapes being necessary**, the change from size to size can be made in a few minutes. The sheets are fed direct into the Grippers, and delivered by flyers in the usual way. Four broad bowl tracks. All tapes driven by gear. The travel of the type-bed is reduced to the lowest point for small sheets, and this advantage, together with its great strength, renders the Machine capable of **exceeding in speed** any other Two-Feeder.

FIVE HUNDRED MACHINES HAVE BEEN SOLD.

Fredk. Ullmer, Ltd., Standard Works, Cross Street, Farringdon Road, London.

The "Standard"

Platen Printing Machine.

Well Built! Quick in Action!

A LARGE NUMBER IN USE IN ENGLAND AND THE COLONIES GIVING
UNIVERSAL SATISFACTION.

Foolscap Folio,
with Ink Duct.
Inside of chase, 13 by 9
£40.

Crown Folio,
with Ink Duct.
Inside of chase, 15 by 10
£50.

DEMY FOLIO,
with Ink Duct.
Inside of chase, 13 by 19
£78.

With Treadle, Ink-duct, Six
Roller Stocks, Roller Mould,
Two Chases, Spanners, and
all other requisites.

Steam Gear £2 extra.
Extra Chases, from 3/-
each.

SPACE REQUIRED, ABOUT 4 ft. SQUARE

Some Advantages that prove that the "Standard" Platen
is a Reliable Machine.

Dead dwell on impression.

Perfect register.

The Impression throw-off is instantaneous, and can be regulated to any degree instantly.

The Grippers can be brought on to the platen without turning the Machine so that they can easily be adjusted.

It is adapted for fine work, having a good distribution.

All the shafts and arms are of steel, and cam wheels are machine-cut.

The framework is very strong.

All materials and workmanship are of the best quality.

Fredk. Ullmer, Ltd., Standard Works, Cross Street, Farringdon Road, London.

The "Little Standard" Treadle Platen Machine.

Made from Entirely New Patterns, and with Latest Improvements.

With Impression Throw-Off Motion.

THE NEW PATENT ANGLO-AMERICAN

“Arab” Platen Printing

Machine.

Inside Measurement of Chase.

Foolscap Folio, 9 in. by 14 in. £48.

Crown Folio, 10 in. by 15½ in. £60.

The above prices include Treadle, Steam Gear, and Ink Duct.

These Machines are always kept in Stock.

6 Roller Stocks (3 covered), Roller Mould, 4 Screw Keys, 2 Screw Drivers, Lever Oil Can, Pliers, 2 Chases, Blanket, Parchment, etc., and Box arranged to contain the same, supplied with each Machine.

Machines ready for immediate delivery on view at the
‘STANDARD’ WORKS.

Space required for Machine and Operator—four feet square.

Specialities of the

Anglo-American “Arab” Printing Machine.

- 1.—The Impression Lever or *Striker* is on the left hand side of the operator, and can be thrown on or off instantly, at any position of the Platen.
- 2.—By the new method of working the Platen, the “dwell” on the type of the paper is twice as long as in other machines of this class—thus saving a severe strain with heavy formes, and giving full and clear impression.
- 3.—Swivel Feeding Guides, with holes drilled for pins, superseding paste and reglet. These Guides will be found invaluable for accurate and quick working.
- 4.—Adjustable Spring Sheet Holder, at right angles.
- 5.—Ratchet motion for holding blanket, same as Cylinder Machines.
- 6.—Rollers kept revolving on leather bearers, prevents rule-cutting.
- 7.—Combined brake and throw-off strap guide, stops the Machine instantly.

If fitted with our Time-Saving Patent Impression Adjuster, the Price is 35/- Net, extra.

Fredk. Ullmer, Ltd., Standard Works, Cross Street, Farringdon Road, London.

UNANIMOUS VERDICT: "EXCELLENT!"

Improved Platen Impression Adjuster.

G. & P.'S PATENT No. 1344/97.

FOR ANGLO-AMERICAN "ARAB"
PLATEN PRINTING MACHINES ONLY. **35/= Net.**

Special Advantages:—

MARVELLOUS TIME SAVER.—Impression can be altered in a few seconds (see testimonials).

WILL REGULATE from a tissue sheet to a thick card.

CAN BE REGULATED at any position of the platen.

STRONG AND RIGID, made of the the best malleable castings.

WILL FIT ANY "ARAB" MACHINE, either Crown folio or Foolscap folio.

NO DIFFICULTY IN FITTING, and nothing to get out of order.

LARGE NUMBER NOW IN USE,
AND EVERY ONE GIVING
COMPLETE SATISFACTION.

MANUFACTURED AND SUPPLIED SOLELY BY

FREDK. ULLMER, Ltd., "Standard" Works,
CROSS STREET, FARRINGDON ROAD, LONDON.

What some good Printers say:

Dear Sirs,
39 & 41, High Street, Peckham, London, S.E.
April 16th, 1896.
The Patent Impression Lever you supplied for one of our "Arab" Machines a few weeks ago answers capitally—it is just what was needed. Those who use the "Arab" and every printer should will appreciate this excellent invention, as it makes the machine additionally serviceable.
Yours faithfully, COOPER & BUDD.

Dear Sirs,
Tunbridge Wells,
January, 1897.
I have tried your Impression Regulator for the past year, with all kinds of jobbing work on a Crown folio "Arab." Sometimes with Foolscap folio Railway Bills (8-line letter), and then with single-line Address Cards. It has given complete satisfaction in every case, and is as good as the day it was put on. I should say no "Arab" is complete without it.
Yours truly, A. K. BALDWIN.

Dear Sirs,
642 & 644, King's Road, Fulham, London, S.W.
April 15th, 1896.
I have given the new "Arab" Impression Regulator you affixed to my machine a good trial, and find it very valuable. I can speak very highly of it, and believe the small cost will soon be covered by the saving of time. Every machine should have one affixed to it. I believe when its usefulness becomes known, its use will be universal. Wishing you every success.
I remain, yours truly, R. BUCKENHAM.

145, Upper Thames Street, London,
October 3rd, 1896.
Dear Sirs,
Having given your Improved Impression Adjuster (three in use) a good trial. Having been in constant use for some months past, we are pleased to testify to the benefit derived therefrom. The speed and accuracy with which it can be regulated makes it superior to any we have come in contact with. Applied to the "Arab" Machine it supplies a want long felt by printers. No "Arab" Machine we consider perfect without it, and we can strongly recommend it to the trade.
Yours truly, A. SMITH & CO.

Folkestone Programme Office,
36 & 38, High Street, Folkestone,
November 4th, 1896.
Dear Sirs,
We have great pleasure in bearing testimony to the value of your Impression Adjuster. It is a great improvement on the old arrangement as previously fitted to the "Arab." The saving of time and labour is a very great consideration, besides being so simple that even the youngest apprentice can adjust the impression to a nicety. We feel sure that it is only necessary for your capital invention to be more widely known to ensure it being adopted in countless machine rooms.
Yours faithfully, W. & G. STROUD.

Redhill,
July 5th, 1896.
Dear Sirs,
Enclosed I send you cheque for Impression Adjuster. I like it very much; it affords a considerable saving of time in altering the impression to suit different jobs, besides enabling the operator to adjust more truly to the requirements of his work. I feel sure that no one using an "Arab" would be without the Improved Impression Adjuster after an experience of the increased facilities it affords. Yours truly, T. K. PEARCE.

Only a small selection from a numerous List.

Fredk. Ullmer, Ltd., Standard Works, Cross Street, Farringdon Road, London.

— PATENT —

“Minerva” Printing Machine.

A LARGE NUMBER IN USE.

2 Chases, 2 Sets of Roller Stocks, Roller Mould, Wrench, Oil Can, &c., delivered with Machine. Steam Gearing, if required, is charged £2 extra.

Cast Chases for the above Machines are kept in Stock, from 3/- each.

PRICES.

Some of the Advantages of the “Minerva” Machine.

- 1.—Simplicity of Construction, Compactness, and Strength.
- 2.—Distribution; this is effected by revolving discs (patented), and is so far superior to that of any other Machine as to be incapable of improvement.
- 3.—The impression may be regulated by a single screw, and can be thrown on or off instantaneously.
- 4.—Register is secured by a Locking Apparatus (patented), which secures the platen so firmly while the impression is being given, that slurring is impossible.

Size.	Inside Chase.	Net Price.

Patent Duplex Distributing Ink Cylinder and Rider Roller	£5 0 0
Steam Fittings, with Automatic Brake	£3 0 0

MADE IN FIVE SIZES TO SUIT ALL REQUIREMENTS.

A QUANTITY of Oil is wasted each week in your machine rooms, just because it needs refining to be again fit for use. Every Printer knows that if only properly filtered, the thick, black liquid which is now discarded as useless would do equally as well as fresh oil. This apparatus will cleanse and make the Oil re-usable.

"Waste Oil" Filter.

(WELLS' PATENT.)

The semi-solid contents of your drip-tins can be used over and over again without loss of lubricating power. The smallest quantity treated as effectually as the maximum capacity of the Apparatus.

PRICES.

- No. 1. Ordinary pattern, will filter 1 gall. of Oil per week 35/-
- No. 2. With separate dirt-settling chamber and eight-feed syphons, will filter about 2 galls. per week - 50/-
- No. 3. As No. 2, but larger, will filter over 4 galls. per week 70/-
- No. 4. As No. 2, but larger, will filter 6 to 8 galls. per week 110/-
- No. 5. The largest size, will filter about 20 galls. per week 189/-

“Mitre” Platen Printing Machine.

Specially Adapted for Heavy Work.
Silver Medal, Melbourne, 1881.

Size.	Inside Measurement of Chase.	Price.
Foolscap Folio ...	10½ in. by 14½ in. ...	£65.
Crown Folio ...	12 in. by 16½ in. ...	£75.
Demy Folio ...	13 in. by 19 in. ...	£85.

Size.	Inside Measurement of Chase.	Price.
Demy Broadside	18½ in. by 23½ in. ...	£125.
Double Foolscap	£168.
Double Crown	£205.

The above Prices include Ink Duct, Steam Apparatus, and all the necessary Appliances.

The “Mitre” HAS a Fixed-Bed Platen of the Highest Class, specially designed for the execution of cut and block work of the finest and heaviest kinds, which it does in the best manner, with small consumption of power, while its working parts are so evenly balanced that it equals in speed and facilities for lighter work, machines of weaker construction, and occupies less space. The platen, firmly guided, approaches parallel to the type, and cannot slur. It is entirely at rest while the sheets are fed. The inking and working arrangements are perfect. The supply of ink, the inking rollers, and the impression can be stopped or regulated at will. It is fitted with every appliance necessary in machines of the kind.

The “MITRE” is in use in many of the Largest Printing Offices in London.

Fredk. Ullmer, Ltd., Standard Works, Cross Street, Farringdon Road, London.

CUNDALL'S "VICTORIA" (Patent) Book-Folding Machine

Has stood the test of many years, and has proved itself to be an Unparalleled Success, resulting in increased popularity and large numbers of repeat orders.

*Pronounced by the Trade to stand before the World Unrivalled.
Write for Latest Catalogue, Price List, and Testimonials.*

Why remain behind the times by Hand Folding, when Cundall's Folders are such a saving in Time and Money? The absurdity is equal to Printers using the old-fashioned Hand-Press instead of the new swift Up-to-Date Machines.

The Only Machine in the World that will fold both Highly-Glazed Paper and all other kinds accurately.

Purchasers should see this Machine, which will convince them at once of its having No Equal in the Market for Accuracy, Adaptability, and Durability.

THE ONLY MACHINE WORKING REGULARLY ON BIBLE WORK.

Unequaled for variety of work and handiness to users.

Used by most of the Leading Houses in this Country.

Largest Makers of Book-Folding Machines in the World.

COUNTERS.

Durant's Printing Machine Counters.

EVERY
PRINTING MACHINE
SHOULD HAVE ONE
ON IT.

**SOMETHING THAT COUNTS!
AND COUNTS ACCURATELY!**

*Received the Highest Award at the
World's Columbian Exposition.*

They are made entirely of iron, steel, and brass. The dials have large black figures that are easily read at a distance. They can be instantly reset to 0 or any number desired. A bracket is furnished with each machine for convenience in securing it to the feeding board of machine. These counters can be used on any machine where it is desirable to keep an automatic record of the work performed. A Counter will soon pay for itself by preventing errors. So used by nearly all printers in the United States.

Each Counter is furnished with a bracket and pull-string for convenience in securing them to any part of the machine. Adapted for Cylinder and Platen Machines. Accurate and durable, and being nickel-plated, are ornamental in appearance.

PRICES.

No. 1.	Four Dials, registering 10,000	£1 15 0
No. 2.	Five Dials, registering 100,000	2 5 0
No. 3.	Five Dials, registering 100,000, with 4 in. gong to give an alarm at each 100	3 7 6

Adapted for Cylinder and Platen Machines.

Adapted for Linotype Machines.

Reliable at high speed. Interchangeable Parts.

Carefully constructed. Largely used.

Have fitted these Counters to many "Standard" Cylinder Machines.

Cuthbertson's Patent Counter.

CANNOT BE TAMPERED WITH.
SIMPLE IN CONSTRUCTION.
COMPACT AND STRONG.
WILL NOT HEAT OR GET OUT OF ORDER.**

PRICES.

Three-Dial Counter, to indicate up to 10,000	£3 0 0
Four-Dial Counter, to indicate up to 100,000	3 10 0
Four-Dial Counter, to indicate up to 100,000, for two-colour or two-feeder machines	4 5 0

Bell, if required, 10/- extra.

DIRECTIONS FOR FIXING THE "CUTHBERTSON" PATENT PRINTING MACHINE COUNTER.

With the Counter is supplied a cast-iron bracket (free of charge) for fixing to machine. A little off centre of cylinder shaft, is fixed a small ordinary iron pin, $\frac{1}{8}$ in. thick. When the Counter is closed, this pin fits into slot at back thereof, which thereby gets its motion. Care should be taken to fix pin in correct position, so as to work in about the middle of the slot at back of Counter. An ordinary fitter can do all that is required at a very small cost. For Litho—the Counter being fixed on brake side of cylinder—we supply a special bracket according to make of Machine.

**TWO GOOD THINGS! TIME SAVERS!
WORK IMPROVERS!**

PATENT RECIPROCATING DISTRIBUTION ROLLERS.

ADVANTAGES:

More equal Distribution of Ink. Great Saving of Ink. Better Work with Single Rolling, while the cost is less by one half than any ordinary Geared Riders.

THE above distinct advantages are gained by the use of this simple appliance, consisting as it does of two highly-finished polished steel **Rider Rollers**, which have a to-and-fro lateral movement of over two inches imparted to them by means of a steel "worm" as shown in drawing. This appliance can be fitted to any ordinary Cylinder Machine, and by means of a friction collar, any possibility of the rollers jumping is entirely avoided, consequently these Rider Rollers can be put in any position whatever, without any possibility of accident through jumping.

OUR PRICE:—

£5 10s.

PER SET OF TWO ROLLERS.

THE PATENT JOGGER-UP.

No danger of breakage when lifting either Flyer or Delivery Board, there being no attachment to the Flyer Shaft.

STRONG AND
RELIABLE.

Fredk. Ullmer, Ltd., Standard Works, Cross Street, Farringdon Road, London.

“Standard” Improved Roller Spring Clamp.

For use on Cylinder Machines, to prevent Rollers jumping. An important acquisition where no Roller Fasteners are already in use.

These are not Toys or roughly-finished articles, but strong, durable, and well-finished; made of the best malleable castings, with gun-metal improved Thumb-screw.

Adaptable to any Cylinder Machine, and a great assistance to even distribution of ink.

Roller Clamp complete.

Section of Roller Bracket, showing Clamp in use.

To fit Roller Brackets with Slots any size up to $\frac{3}{4}$ in. wide - per pair **4s. 6d.**

When giving orders, please say the width of the Slot in Roller Fork, also thickness of the Bracket.

THE above illustrations are self-explanatory. These Roller Clamps are made in sizes to fit roller brackets with slot from $\frac{1}{8}$ to $\frac{3}{4}$ in. wide, and other sizes if necessary. By means of our IMPROVED THUMB-SCREW an excellent leverage is obtained, and no spanner or other tools are required, either to loosen or secure them to roller bracket. The Roller Spring Clamp is simply put into the slot of the roller bracket; the projecting ledge clamps the one side, and the washer and adjustable thumb-screw the other, and make it perfectly secure. The pressure is just sufficient to prevent the rollers jumping, and thereby avoid uneven distribution of ink.

Patented Improved Roller Fork or Bracket.

NOW FITTED TO HIS IMPROVED “STANDARD” CYLINDER PRINTING MACHINES.

PRICES. Demy Folio to Royal size, complete .. **£2 10s.** Per pair.
 Super Royal to Double Royal, complete **£3 10s.** „

LARGER SIZES AT PROPORTIONATE RATES.

CAN be fitted to any Cylinder Machine. All the information required is the position of the holes on the side frame. The above illustration will show the utility of this article. It is generally admitted that rollers, if not held in position when in the roller forks, jump and cause an uneven distribution of ink; but the use of this Patent Roller Bracket will obviate this. It holds the rollers in position, but is sufficiently pliable to allow the amount of play required.

It is strong and durable and not likely to get out of order, and as all parts are made to TEMPLATE there is no difficulty in renewing any of the springs, or pillars, or cross-bars—which are supplied at a trifling charge; and it is so arranged that there is no difficulty in fitting any of the parts referred to in case of renewal or accident.

There is a pillar with a spring on it on each side of each slotted hole, and a cross-piece or bar stretches from one pillar to the other, and when the roller is in position, this cross-piece rests on the end of the roller and is kept down by the pressure of the springs. A thimble-piece is fitted on to the right-hand pillar of each slot and fits into a slotted hole in the cross-bar and secures it. To release the roller, slightly raise the thimble with the fingers and pull the cross-bar away and it falls down as shown above; the roller is then free.

Fredk. Ullmer, Ltd., Standard Works, Cross Street, Farringdon Road, London.

SETS USEFUL IRON BRACKETS.

**LABOUR SAVERS.
SPACE ECONOMISERS.** 

**USEFUL ARTICLES!
EVERY OFFICE SHOULD USE THEM!**

Reversible Iron Galley Brackets.

THIS is on the first glance an ordinary Bracket reversed, so as to accommodate a galley in a sloping position, the projecting lip at the bottom preventing the galley slipping off. It is, however, held in position by being simply placed in a holder attached to the frame or wall, and may be lifted out at pleasure and reversed, thus affording a flat support for either galleys or narrow letter boards.

The ends of frames can in this way be made use of for accommodating a number of galleys, either sloping or flat as may be desired, and vacant parts of walls may be utilised in like manner. It may also be used as a support for randoms for leads, and in fact will be found useful in many respects in office fitting.

PRICE, 2/6 PER PAIR.
SIX PAIRS FOR 14/-.

Case Brackets,

With Sloping Galley Rest.

THIS illustration shows a set of these Brackets fitted on top of Cabinet. The slot in the side of the lower portion is to support the case when access is required to the galley or top of cabinet beneath. Strong, useful, and handy—can be used on table, frame, or cabinet.

LYE BRUSHES—Ordinary Quality.

These are excellent Brushes for wear, although not as stiff in the Bristles as our Best Quality (see above). The length of the Bristle is $\frac{1}{4}$ in. longer.

Ordinary Quality.

Warranted all Bristle.

Size of Brush,	Galley, $6\frac{1}{2}$ in. by $2\frac{1}{2}$ in.	each	s.	d.
"	Small, 8 in. by $2\frac{3}{4}$ in.	"	2	3
"	Medium, $8\frac{3}{4}$ in. by $3\frac{1}{4}$ in.	"	3	3
"	Large, $9\frac{3}{4}$ in. by $3\frac{3}{4}$ in.	"	4	0
"	News, 11 in. by $3\frac{1}{2}$ in.	"	4	6
									5	0

Special Prices for Quantities.

LYE BRUSHES—Special Quality.

Extra Stiff Bristle.

Solid Screwed Back and Grooved.

Size of Brush,	Galley, $6\frac{1}{2}$ in. by $2\frac{1}{2}$ in.	each	s.	d.
"	Small, 8 in. by $2\frac{3}{4}$ in.	"	2	6
"	Medium, $8\frac{3}{4}$ in. by $3\frac{1}{4}$ in.	"	3	6
"	Large, $9\frac{3}{4}$ in. by $3\frac{3}{4}$ in.	"	4	6
"	News, 11 in. by $3\frac{1}{2}$ in.	"	5	0
Special, extra close,	8 in. by $2\frac{3}{4}$ in.	"	5	6
Ditto	$8\frac{3}{4}$ in. by $3\frac{1}{4}$ in.	"	6	6
									7	6

After use care should be taken that no potash or lye remains in the brush, which should be rinsed in water and dried. By this means the brush will last longer and the bristle regain its stiffness.

CHEAP FIBRE LYE BRUSHES.

These will be found useful for coarse work where a cheaper brush than Bristle is required.

Size of Brush,	Small, 8 in. by $2\frac{3}{4}$ in.	each	s.	d.
"	Medium, $8\frac{3}{4}$ in. by $3\frac{1}{4}$ in.	"	1	0
"	Large, $9\frac{3}{4}$ in. by $3\frac{3}{4}$ in.	"	1	4

Prices of other sizes on application.

FIVE POINTS OF ADVANTAGE.

1. It is resilient and reduces the indentation to a minimum.
2. It is sensitive and will work with a light impression, enabling the machinist to secure the best results from worn type or blocks.
3. It saves much time in making ready.
4. It reduces the wear on type and requires less power to drive.
5. It does not easily cut, seldom requires changing, and, with all the above advantages, costs no more than a common Blanket.

INSTRUCTIONS FOR USE.

GENERAL WORK. The nearer the Blanket is to the type, the more sensitive the impression. For ordinary formes, four sheets of paper should be placed on top for making ready. Formes with Half-Tone Blocks require five sheets of paper, ordinary thickness.

HEAVY FORMES (WOOD TYPE OR WOOD BLOCKS). An underlay Blanket of same material can be used to advantage. These can be obtained at half the cost of an ordinary Blanket.

CAUTION: SET-OFFS. Paraffin is better than oil for the set-off sheet. If oil is used, care should be taken that it does not reach the Blanket, or it may soften and injure the fabric. With ordinary care these Blankets are very durable.

FREDK. ULLMER, Ltd., manufacture or stock every description of Printing Machinery and Material, and supply Complete Outfits from a Bodkin to a Fine Art Machine!

They have also generally an excellent stock of Second-Hand Machines, Cylinder and Platen Machines, Cutting Machines, Presses, &c., and can serve you well and save you money.

“Standard”

NOW USED BY MANY OF THE LARGEST PRINTERS IN LONDON AND THE PROVINCES.

AN ENTIRELY NEW CHEMICAL MIXTURE.

CHEAP, QUICK IN CLEANSING, AND HARMLESS.

Type Cleanser.

So Reasonable in Price that everyone may use it, and will keep for months in a dry place. Never — loses its strength or absorbs the moisture. —

THIS is an article of great merit and supersedes Pot and Pearl Ash, Turpentine, Paraffin, &c., for Cleansing Type, &c. It removes all Inks rapidly and thoroughly, and leaves type clean, bright, and free from greasiness. It is a white powder, dissolves easily, leaves no sediment, has no smell, is colourless, and being absolutely free from causticity, is perfectly harmless to everything. Being non-inflammable, the risk of fire is reduced to a minimum. It is a non-irritant and will not affect the skin. It preserves its strength for a long time.

One Cwt. makes 150 Gallons of Wash

AT A COST OF RATHER LESS THAN 1½d. PER GALLON.

SMALLER QUANTITIES IN PROPORTION.

Directions for Use.—Thoroughly dissolve 12 ozs. of the powder in a gallon of boiling water—add the powder slowly, as it then dissolves better. Let it stand till cold and it will become a pure clear liquid ready for use.

PRICES.

14 lb., 3/6. 28 lb., 6/6. 1 cwt. kegs, 24/-.

THE "STANDARD" IMPROVED SHOOTING STICK.

(Registered No.)

NO MORE DAMAGED SURFACES
WHERE
IN USE.

MADE OF BEST
WROUGHT
IRON.

TRY ONE!

PRICE - - 3/- each.

Most printers have reason to complain of the damage done to the beds of Machines and Imposing Surfaces by injudicious use of shooting sticks. This improved Shooting Stick is the invention of a practical machine minder, and is being used successfully. The cross-piece rides on the chase and protects the shooter from dipping, so that no damage can be done to the Imposing Surface or bed of machine. They are very durable and should be in every office, news and jobbing.

INSTRUCTIONS FOR FIXING FREDK. ULLMER'S, LTD., COLUMBIAN PRESSES.

PUT the feet on the staple in their respective places, as marked, and raise it upon them; then place the bar-handle in, with the bolt belonging to it, as marked; put the principal lever into its place, and then the bolt in, which connects it to the staple; then put the angular or crooked part, which has one square and three round holes, through it, into the mortice, which is in the projecting part of the long side of the staple, and place in the bolt that attaches it to the staple. In the extremity of the edges of the heads of the two before-mentioned bolts, you will observe marks, and corresponding marks over the holes through which they pass; put the bolts in so that the said marks meet together and correspond, and so on, until you have all the remaining parts in their respective places. The four screws for the platen, which have heads on one side, are intended to attach the platen to the piston, which being placed in their respective places, are secured by the four small blocks of iron which accompany them. To increase the power, turn the nut in the rod so as to shorten it, and to decrease it, turn contrary way; by the nut on the iron screw, which connects the main and top counterpoise levers, you are to regulate the ascent and descent of the platen, so as to clear the head-bands of the tympan, which is done by screwing the iron nut up as far as is necessary. In adjusting the platen so as to approach the forme exactly parallel, you must, after hanging on the platen and having a forme on the table, square it to your tympan, then make a pull, and hold the bar-handle home until some other person screws the four platen bolts to an equal tightness. The small holes which communicate with the respective bolts require a small quantity of Machine oil occasionally. The impression may be increased by placing thin pieces of tin, or sheet iron cut to the size of the plate of iron which lies between the platen and the piston, secured by the four screws on the top of the platen, and placing it under the piston; you may easily judge whether everything is in its proper place, by the perfect ease with which the bar-handle moves. Pressmen should take all the bolts out of their places once a week, cleaning and oiling them with Machine Oil, Manufactured expressly and to be obtained of FREDERICK ULLMER, Ltd., Cross Street, Farringdon Road.

INSTRUCTIONS FOR FIXING FREDK. ULLMER'S, LTD., ALBION PRESSES.

PUT the feet on the staple, as marked, and raise the staple on them; then place the spring and box on the top of the staple, dropping on the long loop bolt, which is connected with it, into the long hole in the staple; then connect the piston by passing the round bolt through the hole in the staple, and fasten with pin and washer; then put the pull-handle in its place with bolt, tightening it so as to allow the pull-handle to be free; then attach on, with the four screws, the slides or guide-pieces to piston; then place the crooked piece or chill into the piston, also the tumbler or wedge-shaped piece, taking care that the bright or numbered side is towards the pull-handle; then connect the chill with the bolt in pull-handle, screw up the nut or top of the spring-box sufficiently to draw back the pull-handle, so as to keep all parts in their places. The wedge and brass guard in front of piston are intended to regulate the pressure. The other parts of this Press may be fixed in the same manner as the Columbian.

Fredk. Ullmer, Ltd., Standard Works, Cross Street, Farringdon Road, London.

The New "Lion" Press.

THE MOST
POWERFUL PRESS
MANUFACTURED
FOR EMBOSsing.

THESE PRESSES ARE GUARANTEED FOR TWELVE MONTHS.

FIFTEEN OF THESE PRESSES HAVE BEEN SUPPLIED TO ONE FIRM.

THE above Press has been carefully constructed to meet a want long felt by the Trade, for Embossing, or Banknote Printing, or any class of work which requires great power of impression, with the ordinary labour of the Presses now in use, and sufficiently strong to withstand the heavy strain unavoidable in the above work.

Demy "Lion" Press, Platen, 24 in. by 18 in. ... £60.

SELF-FEEDING BRONZER.

THE most perfect device for bronzing in the market. Receives the bronze in a cavity on top (which is closed tightly with a slide) and delivers it through valves, which are opened or closed by the thumbscrew at end, and which regulate the flow of bronze on to a sieve in the midst of fine beaver fur.

No bronze escapes except on the work being bronzed, and a large percentage of the bronze wasted by the old method is saved, as the bronze is fed only as fast as is wanted, and just where wanted on the work, and not over the whole table.

Roller Moulds, split or solid, made to any dimension.

A Quantity of Second-hand Moulds for Sale, various sizes.

Carriage Paid one way on all Orders for Rollers or Composition of £2 and upwards.

A FEW HINTS ON USING ROLLERS.

Look Ahead! Try and avoid using Rollers just after they have been cast.

Keep second set ready, so as to be well-seasoned.

Keep Rollers free from dirt, and in a dry place.

To Clean Rollers, sponge them with a little warm water if room dry; if room damp use a little turps only.

Second quality per pair 6/-

DOUBLE CASE.

Containing Upper and Lower Case, solid whitewood bottom, best quality .. each 4/6

Second quality .. ,, 4/-

TREBLE CASE.

To contain three founts of Capitals, best quality, solid whitewood bottoms .. each 4/6

Second quality .. ,, 4/-

FOUR-FOUNT CASE.

Solid bottom, best quality.

Each 5/6

SIX-FOUNT CASE.

Best quality.

Each 7/-

REGISTERED HALF DOUBLE CASE.

Containing Upper and Lower in one.

PRICE each 4/-

LEADER BOXES.

With space for En, Em, and 2 and 3 em leaders.

Price, each .. 1/- Per doz. .. 10/-

IMPROVED JOBBING CASES.

Improved Jobbing Cases, very useful
for Jobbing Type each 4/6

These Cases are made extra strong, for holding founts of heavy weights, and also suitable for Borders, &c., &c.

IMPROVED UPPER CASES.

Improved Upper Case, best .. each 4/6

These Cases are very useful for Jobbing Type, the boxes being much larger than those of the ordinary upper case, and are made very strong to hold founts of heavy weights.

HALF CASES.

Half Upper Cases, or Half Lower Cases each, 3/-
Half Open Cases each, 1/6

IMPROVED DOUBLE CASE, No. 3.

This Case is a great improvement upon the ordinary Double Case, the Upper Case having only six rows of boxes in depth, instead of seven, thus removing one row of boxes, and allowing consequently larger divisions for the Upper Case. They will be found most useful for containing large Scripts, Italics, Clarendons, &c., &c.

PRICE 4/6

OPEN CASES.

For Jobbing Type or Wood Letter.

Open Cases .. each 2/6
Strips for ditto per doz. 8d.

LEAD CASES.

Lead Cases, of extra strength .. each 3/-

Wood Strips for same, 8d. per dozen.

NEW IMPROVED SPACE CASE.

PRICE 4/6 each.

The above Space Case is very valuable in Jobbing Offices. The boxes are all made to contain hair, thin, middle and thick spaces, em, en, and large quads of eight different bodies. The Case being placed upon a frame, the compositor will find it very convenient in having spaces and quads for fancy and jobbing type bodies in one case.

IMPROVED OPEN CASES.

With slotted sides and centre bar to adjust strips 4/6 each.

Strips for same 8d. per dozen.

NEW REGISTERED DOUBLE CASE, No. 1.

Price - - 6/- each.

The REGISTERED DOUBLE CASE is constructed and arranged to take complete founts of upper and lower in one Case, such as Blacks, Sanseriffs, Latins, Ornamentals, Ancients, &c., &c., keeping the two founts of caps and two founts of lower case quite distinct and separate from each other. In small Jobbing Offices they will be found invaluable.

Upwards of One Thousand of these Cases have been sold. 

IMPROVED DOUBLE CASE, No. 2.

Price - - 6/- each.

This Case is very similar to the Registered Double Case, No. 1, with the exception of there being two extra rows of boxes in the Upper Case.

IMPROVED FOUR-FOUNT CASE, No. 4.

Price - - 5/6 each.

This Case will contain four complete founts of Ornamentals, Titlings, Latins, &c., while the boxes are as large as those of a Treble or Three-Fount Case. They will be found far superior to the ordinary Treble Case in economy of room, the Case being divided into four equal compartments, and the seventh row of boxes in each compartment being omitted.

All these Cases are made the SAME LENGTH, BREADTH, and SIZE as the ORDINARY CASES, and will therefore fit the usual Racks or Frames.

Fredk. Ullmer, Ltd., Standard Works, Cross Street, Farringdon Road, London.

Metal Furniture Cases.

PRICE .. 14/-

Arranged to take Metal Furniture 5, 6, 8, 10, 12, 15, 20, 25, 30, 36, 40, 45, and 50 ems.

Cabinet for Brass Type.

Wood Letter Rack.

These Shelves are very advantageous for holding Wood Letter, prevent warping, and take up little space on wall or partition.

5 feet 6 inches long by 6 inches wide, including two Iron Brackets,

Price - - 11/-

Wider Shelves, advancing 1/- per inch, up to 13 inches.

The "Tier" Lead Rack.

4 Tiers Complete, £1 3s.

THIS Rack is made in Four separate sections and each section is removable and contains 15 divisions marked on illustration.

*THE DIVISIONS ARE 6in. HIGH.
SIZE OF RACK COMPLETE,
19 in. long × 10½ in. back to
front × 28 in. high.*

The "Standard" Lead Rack.

PRICE 30/-

The enquiry, "Have you any good racks for leads?" is now satisfactorily answered in the compact and yet commodious article shown herewith. It stands 28 inches high, is 18 inches across, and the depth (front to back) ranges from 11 inches at the bottom to within 2 inches at the top.

It consists of two tiers of 20 shelves each, which slope in two directions, to the back and to the left, so that the leads are kept in proper position; and will hold 20 sizes each of 4-to-pica and 8-to-pica leads, ranging from 10 ems to 60 ems long—will hold a total weight of 350 lb.

The above Rack made to take a double quantity of 16 ems, 18 ems, 20 ems, 22 ems, and 24 ems, 36 in. high by 18 in. wide **PRICE, 34/-**

“Standard” Lead Rack.

No Printing Office is complete without a “Standard” Lead Rack.

FOR LARGE QUANTITIES.

This Rack is made to store **Large Quantities of Leads** cut to ems, and in full lengths.

The shelves slope downwards from the front, and no amount of vibration will shake the Leads out. The Rack is 3 ft. high, so that the top will serve as a useful bench or bulk.

Size, 4 ft. long, by 3 ft. high, by 10 in. from back to front.

PRICE ... £3 10s.

“Standard” Adjustable Forme Rack.

Invaluable in any Printing Office.

This Rack is made to hold 84 Formes, 12 each of 7 sizes, from Double Demy to Card. The Shelves can be adjusted to any distance to suit any size Chase.

Extra Shelves can be supplied to order, so that more Formes can be accommodated.

Double Rack, as illustration, with 5 adjustable Shelves to take 84 Formes, Size, 7 ft. high, by 5 ft. wide, by 2 ft. from back to front.

PRICE ... £6 15s.

Single Rack, with 3 adjustable Shelves to take 60 Formes. Size, 7 ft. high, by 2 ft. 8 in. wide, by 2 ft. from back to front.

PRICE £4 10s.

Fredk. Ullmer, Ltd., Standard Works, Cross Street, Farringdon Road, London.

— THE —
Registered "Bradley" Drying Rack.

Specially Important now that Fire Insurance Offices are so particular.

Manufactured by Fredk. Ullmer, Ltd., only.

LARGELY IN USE.

This is the invention of a practical printer, and is a perfect arrangement for drying sheets after leaving the machine. The engraving represents this drying rack. The top forms a strong table, suitable for Paging, Eye-letting Machines, &c., or for packing up work. The parts are fitted with iron bed bolts. Special attention of printers is drawn to the advisability of having Drying Racks in their office, and to the fact that Insurance Companies are now very strict in their examinations of Drying Apparatus, and in some cases refuse to insure, or considerably raise the premium, if the old method of drying sheets by suspension poles or cords along the ceiling is adopted.

The "Bradley" Rack is most handy and compact, and we confidently recommend it to printers.

No. 1 Size—6 ft. long, 4 ft. wide, and 3 ft. 6 in. high. Fitted with 24 Double Demy, and 24 Demy Open Trays, with space to take half a ream of paper on each Tray £7 10 0

Six Casters for easy removal, extra (if required) 12/6

No. 2 Size—4 ft. long, 2 ft. 2 in. wide, and 3 ft. high. Fitted with 12 Double Demy Open Trays, with space to take half a ream on each tray 2 15 0

Four Casters for easy removal, extra (if required) 8/-

OTHER SIZES MADE TO ORDER.

The "Handy" Drying Rack.

FOR SMALL WORK.

SPECIALLY SUITABLE FOR PLATEN MACHINES.

Tidiness saves time and cost. Easily moved. Should be in every Office.

The illustration shows the utility of this Rack, and it will be found very convenient for drying small work, and is especially handy for Platen Machines. Each Rack has seven Trays, with a clear space of 3 1/4 inches between each Tray. The Rack, being on iron runners, is easily moved to any part of the room. Made in two sizes as under:—

To take Sheet, size 17 1/2 by 11 1/4 in. ... £1 17 6

Ditto demy, 18 by 22 1/2 in. 2 5 0

Top can be covered with Zinc at a small extra cost.

Every description of Printers' Joinery at lowest rates for first quality.

The "Adaptable" Forme Rack.

CAN BE REGULATED
TO TAKE - - -
ANY SIZE FORME.

*An Acquisition to any Printing Office.
Strong.
Neat Appearance.
Well made and Reliable.*

THE above can be made with two or more shelves, if required. The shelves can be adjusted to any height, to take either card chases, or larger, by means of the bolts in the vertical slots at the sides. When the position of the shelf has been adjusted, see that the nuts on the bolts are screwed well home at both sides, so as to keep the shelves firmly in position. There is a gauge on the front, so that each side of the shelf can be evenly adjusted without the necessity of measuring.

Size 1.—6 ft. high, 1 ft. 6 in. back to front, width, 3 ft., with Racks on top and bottom, and Two Shelves.

£3 5 0
Extra Shelves, each, 7/6.

Size 2.—6 ft. high, 2 ft. 3 in. back to front, width, 3 ft., with Racks on top and front, and Two Shelves.

£4 10 0
Extra Shelves, each, 10/-

Other Sizes made at proportionate prices.

FORME RACKS.

BRASS RULE AND LEAD CUTTERS.

"Imperial"

Brass Rule and Lead Cutter.

PRICES.		
No. 1 to gauge	10 ins.	£0 17 6
do.	16 ins.	1 2 6
No. 2 to gauge	10 ins.	1 2 6
do.	16 ins.	1 10 6

THESE Cutters are strong and well made, and will cut Brass Rule, Leads, &c., rapidly and accurately. The open front gives great facility for quickly feeding the machine. The gauges are easily adjusted.

No. 1 is made with a narrow bed; Leads and Rules are laid up to the same back or fence (as illustration).

No. 2 is fitted with a wide bed and double fence, the back one for Rules and the front one for Leads. By this arrangement we are able to give more angle to the Rule Knife, so that it will cut thick Rules with great ease, while the Lead Knife is kept nearly flat.

**CUTS EASY, CLEAN,
AND TRUE.**

The "Standard" Improved Brass Rule Cutter.

POWERFUL AND ACCURATE.
CUTS CLEAN AND WITH EASE.
LEAVES NO BURR.

This Brass Rule Cutter is used by the Chief Printers in the Kingdom.

Price (Ordinary Size)	..	25s. each.
Large Size, Long Bed	..	30s. ,,

The "Nimble" Mitreing Machine.

This Machine is well finished and mounted on Mahogany Board.

WILL MITRE BRASS OR METAL.
WILL MITRE AT ANY ANGLE.

Square of Machine, 14 by 6 inches.
(Handle included.)

Price 25/-.

Shears.

MANUFACTURED EXPRESSLY.

Improved Strong Brass Rule Shears,

4/6 per pair.

“Standard” Mitreing and Saw Block.

NO PRINTING OFFICE COMPLETE
WITHOUT ONE.

All Iron. Length of Block, 24 inches.

We recommend to the trade this useful article for cutting up Furniture, Reglet, Wood Rule, &c. It is well finished, and has a movable gauge marked to pica ems; can be easily set to saw straight or mitre accurately. The Saw is so fitted that it prevents cutting upon the iron bed.

PRICE, complete (with best Sheffield-made Saw) - - 30/-.

“Standard” Saw Block.

ALL IRON.

This is similar to above, but only fitted for straight cutting. It will be seen that these Saw Blocks are not only very cheap, but are vastly superior to the Wooden Saw Block, and occupy much less room.

PRICE, complete, 12/-
(With best Sheffield-made Saw.)

The “Midget” Saw Block.

SO HANDY AND CHEAP THAT
NO PRINTING OFFICE SHOULD
BE WITHOUT ONE.

Easily mounted on Bench or Counter.
Another useful time-saver.

This Handy Little Saw Block is designed to cut straight only. It should become very popular and quite supersede the cheap wooden ones.

Complete with Saw, 7/6.

The above illustration shows the Block when mounted on bench.

“Standard” Reglet Cutter.

This is a companion to the Brass Rule Cutter we brought out some time ago. It is a time-saver and a handy little article, and will cut Reglet from nonpareil to pica.

PRICE - - 28/-.

Improved Leads.

Leads, 4-to-Pica per lb.	s. d. 0 5	Leads, 8-to-Pica per lb.	s. d. 0 9

Composing Frame Surface.

(FOWLER'S PATENT.)

STRONG!
LIGHT!
PORTABLE!

**Hangs on Front of any
Frame Without
Fastening.**

**Does not Injure Type,
Frame, or Cases.**

The above illustration shows the article hanging on frame, and with galley and forme resting on it.

Weight ... 3 lb. Height ... 8½ in. Width ... 10 in.

Price 10/6 Net.

PRINTERS will realise at sight the advantages of this useful invention. It can be attached to any kind of Composing Frame, and by half a turn of thumb-screw the compositor's galley or case can be raised to a horizontal position, thus greatly facilitating the composition of borders, ornate work, curved and diagonal lines, &c. Immediately adjustable for all sizes and styles of galleys, cases, and frames. Very useful to artistic printers, and saves time and space in being able to build up, correct, and complete many jobs on the composing frame instead of the stone.

Wrought Iron Rack Chases.

Wrought Iron Rack Chases are very useful in Jobbing Offices, no Furniture being required.

To Fit Foolscap Press	£0	12	6

Rack Chases made to fit any size Press or Machine.

In ordering, please state the size of table of the press, by giving the measurement between the corner irons; the size of table inside bearers is required for machines.

Lock-up Card Chases

(CAST IRON.) ===== For Platen Machines.

THIS Improved Card Chase is a simple contrivance, by means of which a great saving can be effected in the time occupied in fitting side-sticks, etc., to formes. The type-side and head of chase are at right angles, so that the type may be secured perfectly square, whilst the other side and foot gradually diverge, so as to form side and foot-stick, both for locking up the formes and also the chase itself in the Cropper or other chases fitted to presses or machines. They are made in three sizes:

	inches.	Price per pair.	s.	d.
No. 1.	7 by 5 outside	...	2	6
No. 2.	8 by 5 „	...	2	6
No. 3.	10 by 6 $\frac{3}{4}$ „	...	3	0

For the outer Chase see Chases for Platen Machines.

PRICE OF KEYS, TWO SHILLINGS EACH.

Above 26 in. are made to work with four pinions.

THIS Locking-up Apparatus dispenses with wooden side and foot-sticks, mallet and shooter, and wooden quoins. As a means of locking up forms it is so powerful that it may be accomplished without any greater effort than that required for opening or shutting a good lock; yet it acts with perfect regularity, and nothing can be more simple or secure.

By the employment of this locking-up apparatus forms may be kept standing for any length of time, as it is not affected either by dryness or humidity like the wooden quoin. Once tightened it cannot, by any possibility, become loosened of itself.

This useful invention is composed of a Quoin or side and foot-stick in tempered metal provided with teeth; and the apparatus completed by a cog with corresponding teeth, which is turned by a key.

The Interchangeable Quoin.

(Hempel's Pattern.)

Made of the very best Malleable Castings.

THIS pattern Quoin is well known, being largely used in the United Kingdom and abroad. All the Quoins are alike, and are interchangeable, every quoin is fitted and tried with Key before being sent out. They are well made. No better article of its kind in the Market.

Are very durable.

Every Quoin well finished.

Special Quotations for large quantities.

These Quoins are manufactured at the "Standard" Works. The very best material used.

SECTIONAL ROUND-HOLE Treadle Perforating Machines.

NOW WITHIN
REACH OF ALL!

SHOULD BE IN
EVERY OFFICE!

WELL FINISHED,
AND
HAS POLISHED
MAHOGANY
BOARDS.

THE advantages of these Perforating Machines are as follows:—Simplicity of construction, combined with strength and solidity; the facility for removal of any pins by merely unscrewing the two nuts, and lifting off the head of the Machine, thus enabling the pins, without trouble, to be set to any given length or pattern; all the pins or punches are made exact to one templet. Duplicate parts and sets of plates, in case of accident, can at any time be supplied without the Machine being returned, *as all parts are made from templates.* This is of great importance to gentlemen from abroad ordering these Machines. The *Pins or Punches are arranged in Sections*, so that loosening the front screws, and taking out one or more of the *steel plates*, and raising the sections will give the blank space required in a few minutes, and the working of the Machine will not in the slightest be interfered with.

PRICES:

No. 1.—Machine to perforate 20 inches clear, with 3 movable sections (one 8 in. and two 6 in.) for blank space when required	£11 0 0
No. 2.—Machine to perforate 27 inches clear, with 4 movable sections (7 in. each) for blank space when required	15 0 0
No. 3.—Machine to perforate 30 inches clear, with 5 movable sections (6 in. each) for blank space when required	17 0 0

Fredk. Ullmer, Ltd., Standard Works, Cross Street, Farringdon Road, London.

THE IMPROVED
'Standard' Steam Perforator

Has been Tested to Perforate Four Thicknesses of Iron.

THE PRINTER'S MACHINE. - - THE BOOKBINDER'S AND STATIONER'S MACHINE.

This Machine is very strongly made, and the 27-in. weighs only 5 cwt.

Will Perforate quite double the quantity of Paper that can be done on a Treadle Machine!

PRICES.

20-in. With Three Sections, **£14 10s.** 27-in. With Four Sections, **£18.**
30-in. With Four Sections, **£21.**

THIS Machine is practically the ordinary Treadle Perforator, only made considerably stronger, and with the addition of a Clutch Pulley, kept constantly running at a speed of about 70 to 75 per minute. The Machine, however, only comes into operation when the foot is put on the Treadle, causing a catch to work into the pulley, and the pinholder to rise and fall, but directly the Treadle is released, the pinholder rises and stops, the action, as will be seen, very much resembling that of a Steam Wire Stitching Machine, or Self-Clamp Guillotine.

The great advantages offered are that a very young girl can, with practically no exertion to herself, do far more work than with the ordinary Treadle Machine. This Machine is guaranteed to perforate thicker sections than can be done by any other make in the Kingdom.

These Machines are thoroughly well made throughout, steel being used in every working part, and a high finish carried out in every detail, the Machines being neatly japanned, and the tables being made of well-seasoned mahogany. Prices, as will be noted, are very little more than the ordinary Treadle Machine.

A.B.C. TRIPLE ACTION

Automatic Hand Numbering Machine.

With Hand-Cut, Hardened Steel Wheels—equal to Type.

COMBINING SIMPLICITY OF ACTION, LIGHTNESS AND DURABILITY (DIAL-SETTING MOVEMENT).

For Numbering Consecutive, Duplicate, and Repeat, by touching a Lever.

To effect any change from Duplicate to Consecutive, press the pointer against the Dial, and move it into any of three slots required.

1. To number Duplicate move it into slot marked DUPL.
2. To number Consecutive move it into slot marked CONS.
3. To number Repeat move it into slot marked REPEAT.

No Ink Disc supplied with the Hand Machines.

**With
Consecutive,
Duplicate, and
Alternate
Numbering.**

The Little "Standard" Numbering Machine.

WITH FRONT GAUGE BOARD AND TWO GAUGES.

If the Machine is to work Duplicate the price will be 10/- extra.

THIS Machine is a handy, inexpensive article, and will be found specially useful in offices where short numbers are required, and where there is not sufficient work for a larger or more expensive Machine. They are made to work consecutive and alternate.

PRICES:

Three-wheel Machine,
to number up to 999,
£5 10 0
Four-wheel Machine, to
number up to 9,999,
£6 5 0

Any size Figures up to No. 4, can be supplied to the above Machines. Specimen figures on page 129.

PATENT AUTOMATIC Type-High Numbering Machine.

THE most perfect and reliable Type-High Numbering Machine in the market, to set up in form in combination with type in any position required; also for

electro or stereo blocks, which can be pierced to allow the Figures to come up to level with surface of Blocks. Being entirely Automatic, the pressure of the Platen or Cylinder on the Star immediately behind the Unit Wheel will rotate the Wheels; as soon as the pressure is withdrawn, the Star lifts the paper off the Wheels, and rotates the Wheel the same time for the following Number; this prevents slurring of the figures.

FOR NUMBERING AND PRINTING
IN ONE OPERATION.

These machines are made with sinkable noughts and Patent Automatic Sliding Cypher No., to be able to number No. 1 to No. 999,999. Instead of the "No." other Letters or Signs can be worked, for instance A 1, &c. These Cyphers or Letters are moved in a groove close to the Unit Wheel when starting, but will slide backwards as each Wheel rotates into position, without stopping the Press.

All Machines in stock have six hardened Steel Wheels, with sizes of Figures as the number on "Postal Orders," which are of our make; a smaller Figure is also made, as size A. Larger Figures than B size cannot be made "type-high," as it involves a larger Diameter of the Wheels, which would make the Machine 1 inch high.

This Machine can be guaranteed to work with perfect inking and perfect changing of figures at the rate of
6,000 per hour.

PRICES:

	Four Wheel, to number up to 9,999	...	£23
(Inclusive of One Set Hard Gun-Metal Figures.)	Five Wheel, " " 99,999	...	£24
	Six Wheel, " " 999,999	...	£25

EXTRA SETS OF FIGURES:

20/- per Wheel in Gun Metal. 35/- per Wheel in Hardened Steel.
Six Wheels in Hardened Steel, £9.

The Steel Figures are prepared by a special secret process, making them so hard that they cannot be touched by a file, and with fair wear and tear may be relied upon to last for a number of years.

New Feature: Repeating Wheels can be supplied to repeat any number up to 12 times, at an extra cost of 4/- for each Repeat above three times.

Can be supplied, if required, with the Specially Hardened Steel Figures, exceedingly durable, and very much cheaper in the long run than the Gun-Metal Figures.

Attention is particularly called to the specially Hardened Steel Pins and Screws supplied throughout this Machine, as this important improvement ensures thorough accuracy and ease in working.

Improved Treadle Paging Machines.

Fitted with every Modern Improvement, with Iron Stand.

Mahogany Rising Table, Inking Apparatus, and Tape Movement.

THESE Machines number alternately, consecutively, and repeat, 2, 3, or 4 times, if required, and print from 1 to 999,999.

PRICE, £32 COMPLETE.

Extra Set of Wheels, £6 10s.

Steel Figures can be supplied, £10 per set.

For size of figures, and prices of extra wheels in gun metal or steel, when ordering see specimen figures under numerical Paging Machines, page 129.

“Pedestal” Treadle Paging Machines.

THESE Machines are made with Iron Stand and Frame, and with mahogany rising and falling table, which is worked by a rack and pinion motion. It numbers alternately, consecutively, and duplicate. The wheels are removable, and extra sets of different size figures can be supplied if required.

6-WHEEL MACHINE.

PRICE, £20 COMPLETE.

Extra Set of Wheels if required ... £6 10s.

For Size of Figures, and prices of extra wheels, in gun metal or steel, when ordering, see specimens under Numerical Paging Machines, page 129.

No. 2 size Figures are generally supplied, unless ordered to the contrary.

“Standard” Self-Clamp Guillotine Cutting Machine.

Special Improvements but
No Increase in Prices.

Simplicity and Ease in
Running are Two Great
Features of this Machine.

FREDERICK ULLMER, Ltd., respectfully draw the attention of the Trade to the “Standard” Self-Clamp Cutting Machine, the design of which has been recently improved in two important particulars, viz:

1. *By the introduction of Double Helical or Herring Bone Gearing, the special advantages of which are increased solidity and strength, and smoothness of running, hence less wear and tear.*
2. *By transferring the Starting Lever to the same side as the driving wheel, which dispenses with the Cam and Shaft, thus simplifying the machine and enabling the operator to momentarily stop or start machine in any position whatever.*

Another unique feature of this machine above all others of its class is that it has a Self-Locking Arrangement, worked by a non-vibrating friction Clutch, which absolutely prevents the Machine from accidentally starting, thus obviating danger to the operator.

Also, the Clamping power of this machine has been thoroughly tested for all classes of paper—writing, printing, glazed, straw, or millboards, &c.—with the greatest satisfaction, *never having failed*. The workmanship of these Machines is of the highest quality, the gearing wheels being cut by machinery; the strength well-proportioned, and placed where most required to stand the greatest strain. This machine is also accurately counter-balanced.

PRICES FOR STEAM POWER.

To cut 38 inches	£110	0	0
" 42 "	125	0	0
" 44 "	140	0	0
" 48 "	170	0	0
" 52 "	220	0	0
" 54 "	245	0	0

Extra Knives are charged at 1/6 per inch.

Other Special Advantages.

No springs or weights are used for the Clamp, thus avoiding the extra power to compress or lift either.

The action is automatic, and so rapid that it starts, clamps, cuts, returns, and stops, in an operation of **THREE SECONDS**.

It is started at full speed immediately, and can be instantly stopped in any part of the cut, and re-started to finish cut, or backed up as desired.

A treadle action allows of the whole of the bottom of the clamp being easily brought down on the pile of paper for the purpose of gauging, leaving both hands free.

Other Advantages of this Machine are too well known to need repetition here.

Fredk. Ullmer, Ltd., Standard Works, Cross Street, Farringdon Road, London.

Frederick Ullmer's, Ltd., New "STANDARD"

Improved Rotary Guillotine Cutting Machine.

Price, with One Knife, and Six Wood Cutting Sticks ... £19.

Extra Knives ... £1 2 6 each.

We advise the use of Wood Cutting Sticks in preference to Lead, and supply them from 3/8 per doz., upwards, according to size of machine.

THIS Machine cuts easily, rapidly, and clean. It has a front gauge. Will cut full 24 inches. A clean diagonal cut. It is a most useful size and it takes up comparatively little space, and can be confidently recommended. It has a vertical and diagonal motion to the knife, which, combined with the Compound Cut Gearing, brings the power required for the cut to the lowest possible amount.

The knife can be detached and drawn through the side of frame without moving or unfastening any other part of the machine.

Working space required, 4 ft. 6 in. by 3 ft. 6 in.

To Cut
24 Inches.

This Machine is only intended for light work, and must not be used for cutting millboard or gum paper, and the knife should always be kept in good order. Keep the Machine clean and well oiled.

30 in. ... " " " " " " " " " " " "	3 10 0

EXTRA BLOCKS SUPPLIED TO ORDER.

THIS simple invention is introduced to the trade to remedy a defect which has existed in all Guillotine Paper Cutting Machines since their introduction, namely, the difficulty experienced in **cutting Labels and all Small Work**. At present the back or travelling guide, against which the paper to be cut is placed, can only be brought forward up to the platen (which presses on the paper) making 2 or 2 1/2 inches, according to the width of the platen, the smallest size that can be accurately cut. This apparatus is placed against the back or travelling guide and brought forward by the regulating screw, which propels it under the platen to the size required to be cut, it is then brought down upon the paper, and the spring compresses with the pressure to about half its fixed height. Wood blocks, varying from 1/2 inch to 2 inches, can be placed on the apparatus according to the required thickness to be cut or trimmed.

Fredk. Ullmer's, Ltd., Label Cutter Guides are adapted to fit all Cutting Machines.

“STANDARD” PATENT SELF-FEEDING Envelope Folding Machine.

FOR STEAM POWER.

THIS Machine can turn out 20,000 envelopes per day. It is self-feeding, and can be attended to by a girl.

For anyone turning out large quantities of any special size envelope it will be found a great money saver.

Each Machine does one size only.

PRICES :

To fold size $3\frac{1}{4} \times 6$	£95.
Do. $4 \times 9\frac{1}{2}$	£125.
Do. 11×6	£135.

Well finished and thoroughly reliable. Other sizes at proportionate prices.

“Standard” Cementing Machine.

FOR
CEMENTING
TOP FLAPS OF
ENVELOPES.

PRICE £8 10s.

“Standard” Gum Mixing Machine.

For Hand or Power.

THIS Machine is very simple in its construction, effecting a great saving in labour as well as in Gum. It can be worked either by Hand or Motive Power. The tub is made of oak, with a strong upright spindle, geared to a crosshead which is very easy to propel, and can be worked by a boy, thus saving the laborious task of the old-fashioned method of gum mixing. It will be found that by this method the gum is of a more even consistency.

PRICE £12.

THIS Machine is intended to take the place of Hydraulic or Screw Presses, and has many advantages over either. The Machine is started with an ordinary strap-fork, and brings down the platen until sufficient pressure is obtained. A number of strong springs are then brought into action. When these springs have stretched a certain amount, they liberate a weight which at once moves the strap on to the loose pulley, and brings into operation a brake which holds the Machine in its position. The pressure can be left on as long as required, when, by lifting a lever, the platen rises to its original position.

The chief feature of this Machine is that the top platen will follow the work down as the air gets out, which gives it a great advantage over the Hydraulic or Screw Press. If the pressure is put on and left overnight, the platen will be found to be considerably lower in the morning.

The Machine is automatic. When the strap is put on, it can be left to put the required pressure without further attention, and will stop without fear of any breakage. By the use of springs each lot will get a uniform amount of pressure, yet this pressure can be altered for different classes of work. No water; no valves or packing leathers to get out of order.

ANY AMOUNT OF PRESSURE CAN BE OBTAINED.

— PATENT —

Card Scoring Machine.

THIS Machine is used for scoring Cards for folding, such as Programmes, Rules, Menu, and Club Cards, Advertisement Calendars, and Folded Cards of every description.

A young girl with this Machine can easily score 1,500 to 2,000 Cards per hour, without risk of spoiling, and all being perfectly scored to an equal depth.

This Machine is very simple, strong, and durable, and its working and management are easily learnt by a girl in a quarter-of-an-hour. The head and side guide, together with the method of guiding the knife, ensures perfect accuracy in the position and depth of the score, and thus prevents all waste.

For ordinary work the plain knives as shown are recommended; for highly glazed and enamelled cards, rotary knives are recommended.

All these qualities of Machines will do first-class work.

LIST OF PRICES :

			Quality A.	Quality B.	Quality C, Plated.
No. 1	To score 8½ in.,	Base Plate 9 in. by 10½ in.	£2 2 0	£2 15 0	£3 15 0
No. 2	„ 12½ in.,	„ 13 in. „ 17 in.	3 10 0	4 5 0	5 10 0
No. 3	„ 18 in.,	„ 19 in. „ 22 in.	5 5 0	6 0 0	—
No. 4	„ 26 in.,	„ 27½ in. „ 27 in.	7 5 0	8 0 0	—

Quality A is a plain partially-bright Machine, with square guide bar, supported at both ends.

Quality B is a bright Machine, polished all over, with V shaped adjustable guide bar, as shown above.

Quality C is a bright nickel-plated Machine, with V shaped overhanging bar. The nickel plating adds greatly to the appearance of the Machine, and also prevents rust or tarnishing, and ensures the greatest cleanliness in scoring.

These Machines can be mounted on a Stand, fitted with Treadle arrangement worked by operator's foot, at an extra charge of: No. 1 size, 30/-; No. 2 size, 45/-; No. 3 size, 55/-; No. 4 size, 65/-

One Plain Knife Holder with two Knives are supplied with each Machine.

Plain Knife Holder	...	each, Sizes Nos. 1 & 2, 3/6; Nos. 3 & 4, 4/6
Plain Knives	...	„ „ „ 1/-; „ 1/3
Rotary Knife Holders	...	„ „ „ 9/6; „ 11/6
Rotary Knives	...	„ „ „ 6/-; „ 7/-

DIRECTIONS FOR USE. Place the card on the plate with the side to be scored upwards, the top edge of the card being against the head guide and the exact line of the fold being under the knife; then bring up the side lay against the side of the card and screw it down firmly. Adjust the knife for depth of score by means of its set screw, lock the screw with the fly nut, prove with a card, and then proceed to score, the knife always cutting in the out stroke towards the head guide, the card being removed before returning.

These Scorers are very largely used in London and the Provinces. Other Scorers, see page 142.

LATEST IMPROVED Roller Scoring Machine.

THE great advantage in this Machine is in the improved form of its cutter, which works with a fixed pivot, on double bearings, thus holding the cutter steady to its work, and ensuring a perfectly straight score. Another important point is that the cutter holders can be fixed on both sides of the slide bar, thus enabling a greater number of cutters to be fixed in a short space; by this means three cutters can, if necessary, be set within half an inch. Small Boxes can be cut and scored out of a large sheet at one operation; in some cases we have 30 Cutters working at once.

PRICES :	{	14-inch, with 2 Cutter Holders	£12	}	To be worked by either Power or Treadle; if for both £1 extra.

IN THE EYELET SIMULTANEOUSLY.

CAPACITY :
3,000 TO 4,000 PER HOUR.

PRICE :

Complete with Wood Table for show-card work, **£16 10s.**

WE have every confidence in recommending this Machine to Printers and Stationers for eyeletting Labels, Show-cards, Calendars, &c.

The special feature of the Machine is, that it punches and eyelets a hole at each stroke of the foot lever, and thus effects a saving of at least 50 per cent. in the cost of eyeletting when compared with work done on two machines, that is, one for punching and another for clenching the eyelets. The eyelets are poured into a box at the top of the Machine from which they are automatically fed to the clenching dies. This self-feeding mechanism is exceedingly simple and effective. It is scarcely possible for it to get out of order, and the eyelets are fed with certainty. When the Machine is required to do punching only, the supply of eyelets may be instantly stopped.

The Machine has a capacity of from 3,000 to 4,000 holes, punched and eyeletted per hour. It also has a very considerable range of work, including thin paper to thick board.

NOW USED BY VERY MANY OF THE LARGEST FIRMS IN
THE UNITED KINGDOM.

Round Cornering Machine.

FOR BOOKS, CARDS, &C.

PRICE:

Including Two Sets of Knives, for $\frac{1}{4}$ in.
and $\frac{3}{8}$ in. radius of rounding... .. **£8**

For Steam Power **£15 10s.**

Will Cut a Maximum Thickness of 3 in.

THE strong and accurate construction of this Machine secures a perfectly straight cut, leaving no burr, and it can be thoroughly relied upon.

This Machine may also be used for cutting straight corners of a maximum width of $\frac{7}{8}$ in. for which a special knife and angle for the table can be supplied at an extra cost of 22/6.

*A Most Useful Machine for
General Use.*

Fredk. Ullmer, Ltd., Standard Works, Cross Street, Farringdon Road, London.

No. 0. Hand Wire Stitching Apparatus.

FOR STITCHING CLOTH PATTERNS, PAPER, &C.

This Machine will work 3 different sizes of Wire Staples and stitch through a maximum thickness of $\frac{1}{8}$ in. of Paper or Cloth. Price = £1

INSTRUCTIONS FOR WORKING.

The Wire Staples are filled into the machine in the following manner:—Pull the rod **a** back until a little hole becomes visible on its side, and turn the hook **b** into it to retain the spring, then drive out the taper-pin **c** by a slight blow, and lift the entire top part off.

A wooden block containing staples is now held against the staple saddle and the staples slipped upon it. After seeing that the staples are straight and even on the saddle, replace the top part, drive the pin **c** in again, turn the hook **b** back and let rod **a** advance gently.

After the gauge **f** has been set so that the stitch will come into the desired spot of the work, the machine is quite ready for starting and is to be worked in the following way:—At first lift the top part by the stud sticking out of its front, place the work under it, pull the knob **d** as far as it will go, then let the top part rest upon the work and give a gentle blow with the fist upon the knob. This blow must be just powerful enough to thrive the staple through the work and clinch its ends. Of course thin work requires a slighter blow than thick work.

No. 3.

Wire Stitching and Binding Machine.

For Hand Power
— Only. —

FOR BOOKS, PAMPHLETS, CATALOGUES, &C.

Price = £2 12 6

It is specially constructed to work extra thin wire staples, and will stitch pamphlets of one section through the centre of the fold, or bind books of several sections up to nearly a $\frac{1}{2}$ in. in thickness through the side, after the manner of stabbed work, at the rate of 700 to 1,500 books or pamphlets per hour on an average.

The Tinned Steel Wire Staples used in this machine are supplied in various sizes to suit thin or thick work, the prices ranging from 3 $\frac{1}{2}$ d. to 4d. per 1,000. They are supplied on wooden blocks of about 400 each.

The wooden blocks are at first charged a $\frac{1}{2}$ d. each, but when empty may be returned for refilling.

Staples can be had by return.

A Million always in Stock.

For Price of Staples see next page.

The Staples are supplied filled on wooden sticks, which hold 400 of the thin ones or 300 of the stout ones. These sticks are charged $\frac{1}{4}$ d. each, but may be returned for refilling.

 A million Staples kept in stock for immediate delivery.

PATENT AUTOMATIC Wire Stitching and Binding Machine.

No. 7.

FOR HAND OR TREADLE POWER.

☞ Takes the Wire direct from a Reel and makes its own Staples.

Makes ONE size of Staples, and will stitch any thickness up to $\frac{3}{16}$ inch.

Mounted on Iron Stand, and fitted with a wooden polished Table and a Drawer for small tools.

PRICE :

£9

WEIGHT :

Net - - 99 lb.

Gross - 160 lb.

Without Iron Stand, Table, and Drawer, for screwing on a bench.

PRICE :

£7 10s.

WEIGHT :

Net - - 57 lb.

Gross - 92 lb.

This Machine will either stitch single sections through the fold, or bind books consisting of several sections to a thickness of $\frac{3}{16}$ inch by stabbing them through the side.

It will work wire from gauge No. 30 suitable for thinnest pamphlet work, to gauge No. 24, for books of $\frac{3}{8}$ inch thick.

The Machine effects a saving of from 60 to 75 per cent. in cost of the wire, as compared with the cost of ready-made staples used in the older Machines, the cost of wire for making 1,000 stitches being less than a halfpenny. Width of stitch is $\frac{5}{8}$ inch.

The wire is supplied wound on reels with iron flanges, which are charged at first but may be returned for refilling.

This cheap Machine is most carefully constructed in all its parts, which are of the very best material and first-class workmanship, being equal in every respect to the larger machines made by this firm.

PATENT AUTOMATIC — No. 7b. —
Wire Stitching and Binding Machine.

*FOR HAND OR
TREADLE POWER.*

Takes the Wire direct from a Reel and
makes its own Staples.

Makes TWO sizes of Staples, and will
stitch any thickness up to five-sixteenths
of an inch.

Wire Stitching and Binding Machine.

FOR STEAM OR
TREADLE POWER.

Takes the Wire direct from a Reel and
make its own Staples.

PRICES:

For Steam Power only **£18 0 0**

For both Steam and Treadle Power
 £19 10 0

To make two stitches at one stroke,
 £6 extra.

THIS Machine will either stitch single sections through the fold, or bind books consisting of several sections by stabbing them through the side up to $\frac{1}{8}$ in. in thickness.

It will work wire from gauge No. 25 down to the finest gauge No. 30, and is therefore specially suitable for thin Pamphlet work, which it will stitch at a rapid rate, the large saddle supplied facilitating the quick feeding in of such work.

The Machine is simple in construction, and can be worked and kept in order by any boy or girl.

Exchange of parts has been avoided altogether.

The wire is supplied wound on reels with iron flanges, which are charged at first, but may be returned for refilling.

This Machine effects a saving of from 60 to 70 per cent. in the cost of the wire, as compared with Machines using ready-made staples.

It is most carefully constructed in all its parts, which are of the very best material and first-class workmanship.

CAN BE SEEN IN OPERATION.

For Steam Power only	£24 0 0
For both Steam and Treadle	25 10 0

WEIGHT: Gross, 275 lb. Net, 187 lb.

THIS Machine will either stitch single sections through the fold, or bind books consisting of several sections by stabbing them through the side up to $\frac{1}{2}$ in. thickness. It will work wire from gauge No. 20 to gauge No. 30, and is specially recommended for binderies where the bulk of the work is thin.

If required for extra wide papers, to be stitched through the fold, this Machine can be furnished with an enlarged frame, which will admit a width of 15 in. at an extra cost of £3 10 0

NEW PATENT AUTOMATIC — No. 34. —
Stitching and Binding Machine

Making Two Stitches at
One Operation with
Adjustable Distance
between them.

PRICE :

Mounted on Iron Stand
with wooden polished
Table and Drawer.

£19 10 0

Without Stand and - -
Table, but arranged to
be fastened on a bench.

£18 0 0

FOR HAND OR
TREADLE POWER.

Makes its own Staples.

THIS Machine will insert Two
Staples at One Stroke and
the distance between the
centres of the stitches is adjust-
able from $2\frac{3}{4}$ in. to $6\frac{1}{4}$ in.

The Machine may be worked
either making one or two stitches
at a time.

It will either stitch single sections through the fold, or bind books consisting of several sections to a thickness of $\frac{1}{16}$ in. by stabbing them through the side.

It will work wire from the finest gauge (No. 30), suitable for the very thinnest work, to the coarsest (No. 21) for books of $\frac{1}{8}$ in. thick.

The Machine is arranged to make two sizes of stitches for thin and thick work, adjustment from one side to the other can be performed in a few minutes. Width of stitches $\frac{5}{8}$ in. for thin work and $\frac{1}{2}$ in. for thick.

It is specially designed for rapidly turning out books or pamphlets, and effects also a great saving in cost of wire as compared with that of ready-made staples used in the older machines, it being under $\frac{1}{4}$ d. for stitching 1000 thin pamphlets.

The wire is supplied wound on spools with iron flanges, at low price: spools (holding about 4 lb. of wire) will be charged at first 1s. each, but may be returned for refilling.

For Country places and the Colonies the permanent detachable spools are recommended. For these spools the wire is supplied wound in suitable coils to be slipped upon the spools, which therefore need not be returned for refilling. One of these spools is required for each thickness of wire used. Price of detachable spools 4s. each.

— No. 16. —

Patent Thread Book Sewing Machine.

MADE IN TWO SIZES.

OCTAVO, for books 11 inches long, and 8 inches deep	£165
FOOLSCAP, ,, 14 $\frac{3}{4}$,, 9 $\frac{3}{4}$,,	£190

THIS Machine will sew books on either tape, cord, or canvas, and on from two to five Bands with adjustable space between them. The quickest speed of the small Machine is 48 stitches per minute, and 42 of the larger one. Discounting all necessary stoppages, from 60,000 to 80,000 sections can be turned out on an average in one week (54 working hours).

Special Advantages.

A number of books can be sewn without being removed from the Machine, as a wooden block of a certain width, determined by the length of the slips of the Bands, is placed between every two books, and with the aid of these blocks the separating and cutting out of the books is made a very quick process, an advantage not to be found with other machines, where the books come out in a lump and must be separated, and the Bands pulled to the desired length by extra hands afterwards.

The needles being straight are not liable to frequent breakages, and the Machine requires hardly any repairs, being of a substantial and solid make.

The Machine sews the sections with single thread all along inside and forms kettle stitches at each end of the book. The thread being supplied by three alternately working shuttles, there appears always a different thread in every following section, so that in the event of a thread being cut in one section, the neighbouring sections will not be affected by this, and remain safe.

SEVERAL HUNDRED OF THESE MACHINES HAVE BEEN SOLD.

— No. 33. —

Patent Thread Book Sewing Machine.

Price = £240.

THIS Machine is specially intended for the sewing of account books, from a royal ledger of 21 inches down to the smallest pocket book, of which five can be sewn at one time and cut asunder afterwards, each band being sewn with a kettle stitch at each side, thus being independent of the neighbouring bands.

The space between bands and kettle stitches, as well as the space between the bands, can be adjusted as required.

Tapes of either $\frac{5}{8}$ in., or 1 in. wide can be used.

Speed 30 to 36 sections per minute.

This Machine working with a double thread, no cuts at head and tail of book are necessary.

WIRE.

Price from 6d. per lb. No. 21, to 10d. No. 30.

A STOCK ALWAYS IN HAND FOR PROMPT DESPATCH.

We supply wire specially made for use on Wire Stitchers, and guaranteed to be suitable quality, neither too soft nor too brittle. We only supply the very best quality that we can recommend.

The wire is supplied wound on spools, either on small ones holding about 4 lb. each, or on large spools holding about 12 lb. each.

The small spools are charged 1/- each, and the large spools 2/- each, and can be returned (freight paid) for refilling.

For the convenience of Country Customers and Exporters, the wire can be wound in coils to fit the *detachable spools*, as illustrated below.

Remove flange "c," slip coil of wire on the spool, the binders of the wire to pass into the grooves in the body of the spool "b," then fasten the flange on the top, cut the binders, turn them well back, or draw them carefully out altogether, and the spool is ready for use. For each thickness of wire used, a detachable spool is required, as the wire is liable to get out of order if it is removed. For refilling these spools, the wire is supplied in coils, which does away with all returning of spools. These detachable spools are charged 4/- each.

Patent Wire Stitching Machine.

(For connecting and securing the joints of flat or tubular boxes lengthwise.)

PRICES:

For Treadle Power £20.

For Steam Power £24.

WEIGHT { Gross - 212 lb.
 { Net - 125 lb.

THIS Machine will stitch boxes of a maximum depth of $12\frac{1}{2}$ in., and of a smallest width of $\frac{7}{16}$ in., and of 28 in. length. It is usually made to produce a staple of $\frac{7}{16}$ in. wide, and stitch any thickness up to $\frac{1}{4}$ in., but if desired it can also be specially arranged to make the staple only $\frac{3}{8}$ in. or $\frac{1}{2}$ in. wide, when of course the maximum thickness will only be $\frac{1}{8}$ in. or $\frac{1}{4}$ in. respectively.

Should the Machine be wanted to make several widths of staple, the extra price for each extra width would be £4.

If desired, the machine can be made with an extra long arm and heavier frame, so that boxes of the large depth of 20 in. can be stitched on it.

The Price of this Enlarged Machine is £24 (for Treadle only).

This Machine can also be used for stitching books or pamphlets, and takes the wire continuously from a reel. It is made of the very best material and most accurate workmanship, so that it is not liable to repairs.

Fredk. Ullmer, Ltd., Standard Works, Cross Street, Farringdon Road, London.

Patent Wire Stitching Machine.

FOR SECURING THE CORNERS OF CARDBOARD BOXES.

No. 19.

PRICE.

Arranged for Treadle - £30. Arranged for Power - £32 10s.

WEIGHT: Gross, 290 lb. Net, 196 lb.

THIS Machine will work a wire continuously from a reel. It will stitch boxes of a maximum depth of over 12 inches, and of any length, and the wire will be tightly clinched and pressed into the cardboard, so that the ends of the stitch will be level with it and not stick out. It is of simple construction, and not liable to quick wear or to get out of order. It requires little power, so that a girl is able to work it the whole day.

— No. 28. —

Patent Wire Stitching Machine.

FOR FLAT CARDBOARD BOXES.

PRICES:

Machine arranged for Treadle, with Table and Drawer ...	£10 10 0
„ „ without „ ...	9 0 0
„ Power	18 0 0

THIS Machine works the wire continuously from a reel and cuts its own staples. It works round wire of gauges Nos. 26, 25, and 24, or also flat wires, Nos. I, II, and III, and will stitch through any thickness of cardboard up to a 3 lb. board; it will admit of boxes of a maximum depth of $6\frac{1}{2}$ inches. This Machine is usually arranged to make stitches the width of crown, being $\frac{5}{8}$ in., but if desired it can also be supplied to make stitches $\frac{3}{8}$ in. or $\frac{1}{4}$ in. wide, but of course in the latter cases, the stitches being shorter, it will only be suitable for thinner cardboards of a maximum thickness of $1\frac{1}{2}$ lb. and 1 lb. respectively. This mode of stitching boxes is very economic, the work being very rapid and the cost of the wire not more than about $\frac{1}{4}$ d. for 1,000 stitches.

No. 30.

Patent Machine for Paring the Edges of Leather.

For
Bookbinding
Purposes.

PRICE - £30.

WEIGHT.

Gross ... 507 lb.
Net ... 420 lb.

PARING the edges of leather by hand has formally been difficult and tedious work, and a want has been felt by bookbinders for a machine which will simplify and quicken this operation. It is of simple construction, and suitable for all qualities of leather, excepting the very softest and spongiest kinds. It is easily adaptable for paring the edges of various widths, and also for the different thicknesses. This Machine at one operation pares a width of $\frac{3}{8}$ in., and if after setting gauge "h" the leather is fed through a second time, width of $1\frac{1}{4}$ inches can be pared.

The work done by the Machine is more even and of greater regularity than handwork, and is turned out at least three times as quick.

The Patent "Ideal" Automatic Single Striker Machine

(WAITE & SHEARD'S).

THE
HIGHEST
CLASS
MACHINE
EVER
MADE.

SOLD
UNDER
AN
IRON-CLAD
GUARANTEE

The "IDEAL" is sold under a positive guarantee by us to excel the best machine made by any other maker or makers in this country.

"IDEAL" BEAM STANDARDS,
"IDEAL" GATE ADJUSTER,
"IDEAL" CAMS.

For Specification and further particulars see next page.

The Patent "Ideal" Automatic Single Striker Machine—*continued.*

AUXILIARY STRIKER.

The "IDEAL" represents the latest improvements in Automatic Ruling Machines and are guaranteed THE BEST IN THE WORLD.

*Well Finished and Reliable.
The Best Machine in the Market.*

THIS Machine represents the latest advance in Ruling Machines. The Ruling Machine itself is constructed, as usual, of thoroughly seasoned wood; all rollers, &c., are made with the greatest care; and all these minor points are up to the standard assured by upwards of twenty years of experience in building such machines. Besides this, there are incorporated numerous important improvements (see foot of specification) which, all combined together, make this the "Ideal" Machine.

Specification.

Each machine is made from the very best selected materials; Birch Frames; Bessemer Steel Shafts through all rollers; Metal Rollers are used in the most vital parts of machine; new preventative for steady working of Pen Carriage; new style Tension Screws for adjusting cloths and strings; new lightning-action Gate; improved Over-head Cord Frame; new adjustable steel Paper Guide, set instantly to any angle; patent improved Gear-Wheel Device, for ruling any length of sheet, it increases speed, as waste room on the cloth is economized; Cloth Guide; improved Pen-lifting Device, for instantly raising and dropping the pens without drag; new improved "Yankee" Lay-boy, with Jogger-up attachments, and patent adjustable Footrests for the receiving of paper.

SPECIAL.

Also, in addition to the above specification we are now adding, *without extra charge*, our new patents the "Ideal" Beam Standards, supplied with turret movement and vertical adjustment; "Ideal" Gate-adjuster, formed of a worm-wheel and a worm; "Ideal" Cams, set up in one tenth the usual time; and the "Ideal" Pen-frame Rack. These patent devices are made and handled only by us, and fitted to no other maker's machine.

The "Ideal" Single Striker Machine.

36 in. between rails, cloth width	31 in.	£45
42 in. ,, ,,	36 in.	£48
48 in. ,, ,,	42 in.	£51
54 in. ,, ,,	48 in.	£55

A set of 10 change wheels furnished with each Machine.

Auxiliary Striker, or second striker attachments, added to the above, to enable the operator, by using both beams, to rule and strike two distinct patterns on one sheet of paper at one feeding; and to rule with more colours at a time without danger of their mixing, &c. Price extra, £5 10s.

Steam Gear attachments, for all machines, Price extra, £2 10s.

The Patent "Ideal" Two-Sider Pen=Ruling Machine

(WAITE & SHEARD'S).

THE NEW SINGLE HEIGHT PATTERN.

THEY ARE NOW BUILT ON OUR NEW DESIGN ONLY.

THE BEST
IN THE
MARKET.

The simplest, MOST CONVENIENT, and most perfect Two-Sider Pen Machine in the world.
Well finished and perfectly reliable.

These Machines have great advantages over the old style (new to rulers) and are specially recommended for speed and accuracy in ruling large quantities.

Steam Gear Attachments, for all Machines, extra, £2 10s.

The No. 1 Two-Sider Pen Machine.

Feint-Lining Machine, to rule one or both sides at one feeding; fitted with the "Ideal" Beam Standards, Cloth Guides, and latest "Yankee" Lay-boy with jogger-up attachments, and patent adjustable Foot-rests, all complete.

36 in. between rails, cloth width 31 in. £63
42 in. between rails, cloth width 36 in. £67
48 in. between rails, cloth width 42 in. £71
54 in. between rails, cloth width 48 in. £76

The No. 2 Two-Sider Pen Machine.

With Single Striker attachments, for striking "first" feed, or feint-lining one or both sides at one feeding; fitted with our new patents, the "Ideal" Beam Standards, "Ideal" Gate Adjuster, "Ideal" Cams, and "Ideal" Pen-frame Rack; also with the improved Gear-wheel device, "Yankee" Lay-boy, and all latest improvements.

36 in. between rails, cloth width 31 in. £73
42 in. between rails, cloth width 36 in. £77
48 in. between rails, cloth width 42 in. £81
54 in. between rails, cloth width 48 in. £86

The No. 3 Two-Sider Pen Machine.

With two Single Strikers, for striking "both" sides, or feint-lining one or both sides at one feeding; fitted with our new patents, the "Ideal" Beam Standards; "Ideal" Gate Adjuster; "Ideal" Cams, and "Ideal" Pen-frame Rack; also with improved Gear-wheel device for ruling any length sheet; with two Gates; new patent Guide, for securing perfect register in ruling second side of sheet; "Yankee" Lay-boy, with patent adjustable Foot-rests, and all latest improvements.

36 in. between rails, cloth width 31 in. £90
42 in. between rails, cloth width 36 in. £94
48 in. between rails, cloth width 42 in. £98
54 in. between rails, cloth width 48 in. £103

Hints to Paper Rulers.

IMPORTANT.—If the cloths ever get damp do not allow the machine to stand still, but keep the rollers turning as the cloth passes over them, to prevent warping.

Have a Steam Dyer to clean your Ruling Machine Cloths, with orders not to shrink them. He will do it better than you can.

Don't let the hot sun shine on your machine, it will not improve it, whether old or new.

Don't tighten the screws in your pen-slides with your wrench, use only the thumb and fingers.

Don't use Pens of different thicknesses in your pen slides at the same time.

To cause the cloth to run towards either side of the machine, turn the tension screw on that side slightly to the left, thus loosening the cloth a trifle on that side of the machine.

Run a New Machine a few days if possible, with the cloth slack, and with reasonable oiling of the journals several times a day till all the parts find their bearings, then tighten up the cloths gradually day by day.

The Spring to prevent jar to beam should be almost vertical.

Use baby flannel (white), at about two shillings a yard for inking purposes.

Use a sheet of zinc on the feed table, the paper slips better.

DIE STAMPING DEPARTMENT.

TO SUIT EVERY DESCRIPTION OF ORDINARY DIE STAMPING.

Die Stamping Presses.

To suit every class. FOR PLAIN, RELIEF, OR CAMEO STAMPING.

No. 1.

Will take a Die 2 in. diameter, or 2½ in. oblong. Height of body, 15 in.; base, 12 in. by 5½ in.

£5.

With Gauge Board and Inking Slide, 47/6 extra, as on No. 5.

Can be had with Springs instead of Balance Weight if desired.

Strong wood stand with drawer, 20/- extra.

Workman's Relief Stamping Presses.

No. 3.

Size of base, 11 in. by 6½ in.; weight, 1 cwt. 1 qr. 18 lb. Takes Die 2½ in. by 1 in. and under.

£8.

No. 3 is large enough for any ordinary Die, and is fitted complete with guide board, two sets of chucks and dabs, and spanner.

Strong wood stand with drawer, 24/- extra.

No. 4.

Size of base, 10½ in. by 8½ in.; weight, 3 cwt. 1 qr. 10 lb. Takes Die 3½ in. by 1½ in. and under.

£15.

No. 4 is a very powerful Press, suitable for large Dies, Gold Stamping on card, and general heavy work. Three sets of chucks and dabs are supplied with this Press in addition to the usual fittings. Like the one above it has been subjected to the severest test in the stamping department, and may be relied on to bring up successfully the most difficult work.

Strong wood stand with drawer, 30/- extra.

An outfit assortment of Colours. &c., can be supplied for £2 extra.

Die Stamping Presses.

The "Standard" Improved Lithographic Presses.

WITH SIDE LEVER MOTION, BEST MANUFACTURE, MALLEABLE IRON HEADS.

Class A, Best Quality Material.
Superior Manufacture.
Well made and very reliable.

The great improvement in these Presses is that the roller and eccentric can be taken out, or placed in, without unscrewing the framework, which saves a great deal of time and trouble.

Runners, 7/6 per pair extra. Re-seaming Rollers, 2/6 per foot run.
 Roller Flannel, 54 inches wide, 6/- per yard.

THE ABOVE PRICES ARE FOR ORDINARY SIZE ROLLERS.

To ensure accuracy, it is advisable to supply sketches giving full dimensions of the Rollers required, showing length and circumference of body, length and circumference of spindle, and distances between the shoulders. The best French leather is recommended as far preferable to English, for the grain is much finer and softer, hence is not only more readily got into working order, but yields better results.

PATENT

Ink and Colour Mixing Mills.

From Photograph of Mill with Rolls 15 in. by 6½ in.

RAPID
GRINDING.

FINE
GRINDING.

MASSIVE!
DURABLE!!
RELIABLE!!!

THE Mills have powerful gearing, heavy gun-metal bearings, spiral springs, Rolls all running at different speeds, immovable on steel spindles, and are of sound and accurate construction and high finish throughout, requiring *little power compared with ordinary Mills*. The Rolls (both *Iron and Granite and Chilled*) are finished by a patent American process, which makes them perfectly straight and true, and imparts a *beautiful polish*.

This illustration represents Grinding Mills with three equal diameter Rolls fixed horizontally on strong massive frames, and capable of grinding all wet materials in the best style. Valuable improvements, *not to be found on any others in the market*, are embodied in these Machines, which are characterised by *compactness, simplicity of mechanism, and great productive power*, grinding to any fineness the most delicate colours.

Improved Shooting Slab and Plane.

Shooting Block, 18 in. by 14 in., with one knife ... £10 10 0

THIS Slab is strongly constructed, and designed for accurately squaring metal plates and wood blocks. The slab and planes are made of iron, and the surfaces, on which the plane slides, are planed perfectly true. The planes are fitted with one, two, or three knives, for type-high bevelling zinc and copper plates. The knives are easily adjusted by means of the set screw.

THE "STANDARD" Circular Saw Benches.

For Printers & Stereotypers.

Will cut stereo 1 in. in thickness.

Extra Saws 7/6 each.

No. 1 is a combined Circular Saw Bench with Plane attached. The top plate is 28 in. by 27 in.; the largest space clear of Saw, &c., is 25 in. by 16 1/2 in.; it is planed twice over so as to be equal to any imposing surface; is hinged at back, so that it can be swung over for taking saw out for sharpening; and has a T slot along the front for sliding gauge. It is fitted with steel saw spindle and saw to cut type high and runs on steel centres if for treadle only, or in long bearings if for treadle and power. It has a strong crank shaft; heavy turned fly wheel; and is mounted on strong iron framing.

Complete for Treadle only

— £9 —

For Treadle and Power

— £9 15s. —

If fitted with hand wheel and screw, to rise and fall table, 15/- extra.

The above saw bench can be fitted with a larger table, size 37 1/2 in. by 27 in., with saw to work clear of the framing and giving every facility for the working of large plates. Price on application.

No. 2 is a similar bench to No. 1, but is without the plane attached. The size of top plate is 27 in. by 20 in.; it is planed twice over so as to be equal to any Imposing Surface; is hinged at back so that it can be swung over for taking saw out for sharpening; and has a T slot along the front for sliding gauge. It is fitted with steel saw spindle and saw to cut type-high; and runs on steel centres if for treadle only, or in long bearings if for treadle and power. It has a strong crank shaft, heavy turned fly wheel, and is mounted on strong iron framing.

Complete for Treadle only ... £7

For Treadle and Power ... £7 15s.

"STANDARD" Pillar Circular Saw.

HANDY. LIGHT. COMPACT.
PORTABLE.

Adapted for cutting Wood or Metal.

Table ... 20 in. by 20 in.

PRICES:

For Treadle only ... £6 10s.

For Power only ... £6 10s.

For both Treadle and Power ... £7

Movable Fence or Guide, as illustrated, extra ... 10s.

Stereo Casting Box.

The above represents an improved and accurately balanced Stereo Casting Box, fitted with atmospheric burner and tubing, and mounted on strong iron framing.

PRICES:

ROYAL FOLIO...	23½ in. by 14½ in.	£9 10s.
CROWN...	25 in. by 18 in.	£10 10s.
SPECIAL	29½ in. by 16½ in.	£11 10s.
FULL DEMY	28 in. by 22 in.	£19

News Column Casting Boxes.

For casting type-high cored news columns to any set width up to 16 ems and up to 26½ in. long.

PRICE ... £11 10s.

Any of these Casting Boxes can be specially fitted for casting Type High Plates, at slightly increased prices.

Stereotyping Apparatus.

FOR BURNING COAL, COKE, OR CHARCOAL.

Each apparatus consists of Drying and Casting Press, with Metal Melting Furnace underneath; Iron Plane and Shooting Bench; Pica Gauges; Two Ladles; One Skimmer; Mallet; Hammer; Two Chisels; Two Punches; and Beating Oil, Chalk, and Paste Brushes.

PRICES:

NEWS SIZE, 28 in. by 14½ in.,	book and jobbing ...	£17 10s.
ROYAL FOLIO, 23½ in. by 14½ in.	book and jobbing ...	£14 10s.
DEMY FOLIO, 18 in. by 11½ in.,	book and jobbing ...	£11 10s.
DEMY QUARTO, 15 in. by 10½ in.,	book and jobbing ...	£10 10s.

This is a most compact, simple, and complete Apparatus, and can be worked in a small space. Only one Press is required for Drying and Casting.

**IMPROVED
Atmospheric
Gas Chamber.**

SIZE:
30 by 34 by 34 in.

PRICE: £38.

Other Sizes at
Special Prices.

This Gas-heated Chamber is strongly constructed. It is fitted with Atmospheric Burners and Platen Press. The gas supply has two cocks, and so arranged that a greater heat can be had under the Platen, or an even heat all over the chamber, as required.

**IMPROVED BALANCED
Stereo Casting Boxes.**

Fitted with wrought-iron columns and adjustable joints for fixing to platen to any elevation that may be required for thick or thin plates.

PRICES:

Size of Platen.	£18.
19 in. by 13 in.	£24.
25 in. by 16 in.	£30.
31 in. by 18 in.	£38.
32 in. by 23 in.	£18.
Special Column Casting Box, to cast a column up to 28 in.	£18.

Hand=Power Moulding Press.

THIS Press has been designed unusually strong, and a great pressure can be sustained without straining any of its parts.

An important feature of the Press is that an even pressure is always given to the mould.

The Press will mould from the smallest form up to 24 in. by 24 in.

Space between the columns 25 in. by 24 in.

PRICE ... £72.

— Improved —

Electrotypers' Backing-up Furnace and Metal Pot.

THE FURNACE IS
STRONGLY
CONSTRUCTED
OF IRON.

STOCK SIZES AS UNDER:

Backing-up Furnace and Pot.

31 in. by 24 in. ... £28.
37 in. by 30 in. £36.

Fixing Extra.

Improved Planing Machine.

FITTED FOR STEAM
POWER, AND WITH
ELEVATING HEAD.

This Machine is very strong, well constructed, and self-containing. The planing knife can be easily adjusted to plane thin and type-high plates. This Machine is fitted with a screw platen to keep the plate flat whilst planing, also automatic striking gear and adjustable stops, strong gear wheels, and quick return motion.

PRICES:

Will plane plates up to	24 in. by 12 in.	£90.
Ditto	24 in. by 15 in.	£105.
Ditto	24 in. by 18 in.	£120.

Improved Bevelling Machine.

WITH CROSSHEAD AND PLATEN FOR
HOLDING PLATES PERFECTLY RIGID
WHEN BEING BEVELLED.

This Machine is for bevelling the edges of plates, and will be found of great assistance where many book-work plates are made. The table is strongly constructed, adjustable, is fitted with gauges, and can be raised or lowered to the desired height by means of the hand wheel. This Machine is fitted with a three-cutter head, and has a stationary knife for planing burs off the edges of plates. Countershaft, fast and loose pulleys, and hand-feed, with quick-thread screw.

Size of sliding table, 24 in. by 12 in.
Will bevel plates up to 19 in.

PRICE ... £68.

TYPE=CASTING MACHINES.

FOR GAS OR FUEL, COMPLETE.

WE place these Type-Casting Machines before the Trade with confidence. They will rank second to none for durability and workmanship. Every care has been taken to make these Machines complete, and only the best material is used in building, while, to facilitate repairs at any time, all parts are made interchangeable. We guarantee all our Machines, Tools, and Matrices. By using our breaking-off moulds with non-rubbing matrices, type equal to that of the leading type-founders can be produced, labour and space saved, and all profits appropriated by the user.

Ditto on Treadle Stand	7 5 0

STEAM POWER £2 EXTRA.

KERNING.—The worrying and expensive department in type-founding made a pleasure by using the newest "Rotary" Kerning Machine—simple, effective, and speed more than tripled.

By the use of this simple machine the tedious and expensive system of kerning by the old file process is done away with. An adjustable guide is provided so that any angle can be obtained, and each machine is provided with an emery wheel for sharpening the cutters. While the files cost from 7/6 each, the cutters made any angle can be fitted from 9d. each. The output is almost doubled and the machine can be worked by a boy or girl.

IMPROVED TREADLE STABBING MACHINE.

This Stabbing Machine contains many advantages:—

- 1.—It is made complete with Stand, thus requiring no fixing.
- 2.—It is worked by Treadle, thus leaving both hands of the person using it at liberty, and consequently is far more speedy.
- 3.—The return action is obtained by a strong India-rubber spring, instead of the old-fashioned wood spring, so frequently breaking.
- 4.—The needles are so fitted as to be removed to a wider distance apart when required for stabbing larger work.

Price, complete with Stand, 26/- net.

Bookbinders' Saw Bench.

This Machine is for sawing the Backs of Books; and it is arranged for foot or steam power, including seven Circular Saws, and various sized Washers for changing every quarter-of-an-inch.

Price, £18 and upwards.

Bookbinders' Backing Machine.

For Cloth or Leather work, of great power, and with all recent improvements.

DIRECTIONS FOR USING THE BOOK-BACKING MACHINE.

According to the thickness of the book, so must the segment of the circle be set. For a thick book the circle must be large, for which turn upwards the thumb-screws attached to the roller. For a thin book lower the roller by turning the thumb-screws down. After having placed the book in between the jaws, and got the required nip (which is done by turning the wheel that stands on the top of the Machine), you lock it by treading on the left-foot treadle; then take the roller-frame, holding the handle upright, tread on the right-foot treadle, and lock it; then try the roller backwards and forwards carefully until you have formed the groove. If you find that you are too hard on the book, turn the wheel on the left side of the Machine, and draw the double-ended wedge so as to lower the jaws. If you, on trying again, find that the roller comes too hard on the groove part of the book, and is difficult to bring over, you may then expect the circle is set too small, and raise the roller accordingly. When you are trying the circle, and the roller comes on the middle of the back, and drops easily over each side without forming a groove, the circle is too large. To remedy this, set the roller down a little. After having got the circle right, you must put more or less pressure on the book by turning the wheel that raises or lowers the jaws. After having backed the book, hold the roller-frame by the left hand, inclining it backwards; place your right hand under the jaws to receive the book; then with your right foot tread across the two projecting pedals, and the book will drop into your hand, and the roller-frame you will ease down to its resting place on the wood.

Length in Jaw—14 inches, £35; 15 inches, £38; 20 inches, £46.
